Lives there a man with soul so dead,
Who never to himself has said
This is my own---**The Farmers' Store.**

One hundred and four men put up $10,400 out of their own pockets to establish a store that has saved every farmer within Twenty-five miles of Delia hundreds of dollars. Are you doing your share toward making it able to save you more hundreds?

That store has been refused the privilege of buying from certain wholesalers because it sold at too small a profit---and yet that too small profit has produced 100% over its investment in five years' trading.

That store has sold on a small profit in order to give value on a *charge account* equal to value given by mail order houses on a *cash in advance* account.

WE EXPECT THIS WEEK:

Head Lettuce, at 10c per head	Lemon Cup (large), at 80c
Shelled Walnuts (halves), 40c lb.	Bananas, 15c per lb.
Oranges, sweet and juicy, at 30c doz.	Celery, 12c per lb.
Lime Juice (quarts), at 90c	Sockeye Salmon (tall), 45c tin
Grape Juice (quarts), at 75c	Red Plum Jam, 4 lbs. 65c

Phone in your order so that we may have your goods ready for you when you call Phone **39**

The Delia Farmers' Co-operative Assoc., Ltd.

Negotiations Between U.G.G and Pool Collapse

CANNOT AGREE AS TO MANAGER

The negotiations between the United Grain Growers and the Alberta Wheat Pool, in connection with elevators, which have been going on several months, and which had been carried to the point where there was complete agreement between the U.G.G. and the pool as to the terms and conditions of the arrangement, have broken down on the one question of who should be manager of the new elevator operating company which was to be formed to operate all the elevators of the company and the pool in Alberta, and which was to be carried on by a board of eight members, four from the pool board and an equal number from the U.G.G. board.

The final breakdown in the negotiations was officially announced at the office of the Wheat Pool on Monday.

The United Grain Growers' representatives on the proposed new board suggested that one of the present directors should be president of the new company and that E. S. McEory, manager of the United Grain Growers' office in Calgary, should be manager.

The Alberta Pool representatives on the board suggested that one of the United Grain Growers' representatives should be president and that a man of recognized standing in the elevator business and not previously connected with either the pool or the U.G.G. should be selected as manager. The chief objection of the pool representatives was that if Mr. McEory were retained as manager there would be a great deal of criticism in the province on the ground that the old United Grain Growers management was being continued.

Had the Confidence

The United Grain Growers' representatives on the proposed new board urged chiefly that Mr. McEory had to a large measure the confidence of the farmers of Alberta, both pool and non-pool, that he had demonstrated his ability in managing the 180 elevators owned by the U.G.G. in Alberta, and that from the point of view of the success of the new operating company it was a mistake to drop him for a new man who would have to famiiarize himself with the whole system and organization.

It was found impossible to reach an agreement on this point, and it has been decided to continue for the time being under the existing arrangements under which the pool and the company have worked in Alberta since the pool was organized three years ago.

Chief Winners at the Calgary Stampede

Productive of some of the hardest bucking and best riding ever witnessed on the local infield, the Calgary 1926 stampede programme came to a close on Saturday afternoon.

The sensation of the week: Harry Knight, youthful rider from Banff, won the Canadian title and the Prince of Wales' Cup, in addition to the honors in the bareback event. It was the first show for the 19-year-old rider and his performance was sensational in the extreme.

Breezy Cox, last year's open event saddle champion, had to bow before his countryman, Mike Stuart, of Tulare, California. Breezy placed second in the final money for this event. But the genial competitor from Salmonville, Arizona, took the lion's share of last year's money. He scored no less than $1,700 on the final awards, getting $1,000 for winning the open calf roping.

The chief winners were:---

North American saddle contest: Mike Stuart, Tulare, Cal.

Bareback bronco rider: Harry Knight, Banff.

Men's steer riding: Tom McCoy, Irricana.

Boys' steer riding: James R. Boyle, Calgary.

North American calf roper: Breezy Cox, Salmonville, Ariz.

Canadian calf roper: Ray Knight, Raymond, Alta.

U. F. A. Members Endorse Premier Brownlee

Hearty endorsation of the plans and policies of Premier Brownlee and confidence in his leadership were expressed by the unanimous U.F.A. members held on Thursday last at Edmonton. The premier outlined the general purpose and intentions of the government with regard to the problems facing it in its second term of office, and there was complete approval of them.

No conclusions in these several matters were reached, but Mr. Brownlee said Friday morning that definite action will be taken with regard to some of them before he goes on his holidays and other announcement of such decisions will be made in due course.

The matter among other questions to the portfolio of public works and what is to be done about Hon. Alex Ross, who was defeated at the recent election. In this regard the premier was left with a free hand.

Canada's wheat yield is estimated on June 30 is 343,326,000 bushels.

The Split Among The Progressives

Denial of the right of E. J. Garland, Bow River, or Robert Forke to speak for the Progressive group as a whole was made in a signed statement by W. T. Lucas, Progressive, Camrose. The statement reads:---

"I have read with interest the statements issued by E. J. Garland and Robert Forke. I take the position that neither of these gentlemen has any authority to speak for the Progressive group as a whole, and the statements referred to are simply expressions of members based upon certain interpretations of what took place during the last few days.

"These statements, I feel confident, do not express the views of at least five members of the Progressive group. Mr. Garland and Mr. Forke both deny that the Progressive members gave any assurance to the premier-general that they would support Mr. Meighen to speed up the work of the session and pass the legislation which has already reached the senate and which was of such importance to the West.

"If no such promise was given why, it may be asked did Mr. Forke insist on government-general at all? Why was the memorandum prepared, why was it passed unanimously by the Progressive group in conference? Furthermore, why did the members of the group sustain the Meighen administration on at least two divisions prior to the vote on the constitutional question?

"I may be mistaken but it would seem to me that the constitutional question is simply a smoke screen created by the Liberal party and its defenders to becloud the real issue. The issue before the people is undoubtedly that of the conscious scandal.

"When the real facts are known this scandal will be disclosed as one of the worst that has ever besmirched the public life of this country. Indeed, the details are too horrible to permit of discussion from the public platform, but suppressive measure found to convey to the electors the truth with respect to the conditions as they existed prior to the action taken by the Hon. H. H. Stevens.

"I have nothing but the most profound admiration for Mr. Kennedy, of Peace River, the Progressive representative on the committee of inquiry. Mr. Kennedy, knowing the facts, voted for the censure of the government against the majority of his own group although they had previously decided at a caucus to support him against the King government. Just why they changed their minds is something that Mr. Forke and Mr. Garland have yet to explain."

Lambton Municipal District Council

The usual monthly meeting of the above council was held at Craigmyle on Saturday, June 3, all the members being present.

J. B. Boon, weed inspector, was present and gave a report on the work he had been doing. He reported that while most of the farmers were willing to co-operate with him there were a few from whom he could get no action, and that he had been obliged, after laying given several warnings, to have summonses issued against a few of these men. Mr. Boon also advised that the provincial weed inspector had been around with him several times and that he appeared highly satisfied with the way the weeds were being handled in the municipality.

Mr. Boon thought the council should get after the railway company to use oil to destroy the weeds on their right-of-way this year. He also thought the Provincial Government should be asked to adopt the same method along the trunk highway. He said the weed inspector's job was a much bigger undertaking than he had estimated. He was being continually called all over the municipality and was on the go practically all the time. In order to give efficient service and get over the country quickly he had found it necessary to use his car. He was not trying to back out of the job, but it would be impossible for him to continue to use his car unless his remuneration was increased. He suggested that it should be granted another $200.

The council promised to consider the matter.

W. J. Bryan was present in connection with his application for a road out of his place. He said that in 1917 a two-rod strip had been surveyed and expropriated for road purposes along the north of the S½ of Section 4 and S½ of Section 3-31-17-4 and also along the S½ of Sections 10 and 11-31-17-4, and that at that time patent had been issued to N.E. 2-31-17-4, but that it did not appear that the owner of this quarter had ever been compensated for the two acres taken.

Councillor Davey reported that he had interviewed Mr. J. Fennell in connection with opening up this road. Mr. Fennell had agreed that the land had been taken off his cities for this road and that the municipality had the right to compel the road. He said, however, that Mr. Fennell was very much against the road being put in as it would cut up his land. He had offered to pay the municipality $400 if they would have the road survey and this place cancelled and the acreage returned to him.

After some discussion the council decided that the road was not justified to the road, and it was moved by Councillor McDonald that Councillor Davey be authorized to settle with Mr. Fennell with a view to having this road put through and of reimbursing him for same.

Councillor Simpson reported that he had interviewed Mrs. Campbell in connection with her widow's pension. He found that two of the children were old enough to leave home and were working most of the time. He considered that the pension Mrs. Campbell was receiving was sufficient for her needs and that she had not applied for any increase. He moved that the pension allowance of Mrs. Campbell's pension be continued at the present rate of $10 per month.

The question of allowing R. R. Boon, weed inspector, an increased remuneration was then discussed, and it was agreed by the whole council that Mr. Boon was doing good work and that he could not be expected to do it for the year and drive his own car for $500.

Councillor Heidt moved that Mr. Boon's remuneration for the year be increased to $700.

Councillor McDonald reported that Mr. Davey was willing to allow a drain to be put through his land and that he had decided to raise the road grade between Secs. 2 and 30-32-16-4 in order to get portion of the road passable.

The following correspondence was read:---J. M. Black, Supt. of Deaf-mute Children, Dept. of Public Health, and K. Brexit.

The accounts as presented were ordered paid, and council adjourned.

Sheep Ranchers Come To Canada From U.S

Several sheep ranchers from the United States have recently made extensive purchases of land in the interior of British Columbia. Sheep raising on a large scale will be conducted in territory previously considered unsuitable only by the cattle industry.

Alberta Government Crop Report

EDMONTON, July 10, 1926.

Generally satisfactory conditions prevail throughout the province with respect to the growing crops. A period of great heat has occurred since last report, but the crops have not suffered very little thereby. The weather generality is ideal for growth.

Early seeded grain in the south is in head, and short, and with more rain will produce a fair yield. There has been generous precipitation throughout the south with the exception of a few limited areas and the prospects are encouraging. Late sown grain in the south is progressing rapidly and making a most satisfactory condition.

In the central and northern part while there has not been any fodder heavy precipitation in general the conditions are excellent. From 35 to 50 per cent of the wheat in central districts is heading out.

Hail is reported from one or two districts but the damage has been slight. The general consensus of opinion is that with normal conditions the province will harvest above an average crop.

Irrigated crops in the south are in excellent stage. Alfalfa has been a very good crop for the first cutting, and the corn and sugar beets are coming along well.

Pasturage has been good and there is an increase in milk production.

Hand Hills Stampede

That ever popular event, the Hand Hills Stampede, will be held on Wednesday, July 21, and it goes without saying that given fine weather it will prove as attractive as ever to the people over a wide area. There will be the usual attractions---splendid horse racing, exciting stampede events, picture show, dancing, side shows, etc.

In the stampede events many of the riders which participated in the big stampede at Calgary last week will take part, and together with these will horses will furnish a good afternoon's sport.

The management have this year decided to specialize on the fine dancing which will add materially to the [illegible]

BRASS BAND IN ATTENDANCE

Crop in Excellent Condition

Wheat has almost attained its full growth in many districts in Alberta, and is headed out, showing promise of a bountiful maturity. The yield throughout the south and central sections of the province should be better than average this year and the acreage is estimated to be larger than in 1925.

An important factor this year is the presence of sufficient moisture in many districts to carry the crop through, no matter how hot and dry the weather may be during the interval before harvest time. Only in the Drumheller district is any shortage of moisture reported.

Thanks to recent heavy rains the crops locally are in splendid shape, having stooled out well, of a beautiful color and of a good length.

In the Hanna district the crops are said to be exceptionally promising. In fact this looks like the biggest crop since 1916, and may exceed even that. A very large acreage of summerfallowing is being done, and there is still sufficient moisture for seeding.

In the Drumheller district farmers report the need of rain. The crops in the uplands are in pretty good shape, but those on the light soil are beginning to burn up.

U.F.A. Science 44 Seats

Edmonton, July 9.—Declaration Day in Alberta found the Farmer party returned to power with a strengthened majority of 44 seats. The Liberals have five, Labor five, and the Conservatives four. In this way 58 of the 60 seats are accounted for. The two missing seats are Athabasca, not yet reported, and Bow Valley, where a recount is to be made.

New Road Map

The 1926 edition of the Automobile Road Map of Alberta, described by Premier W. Brownlee, president of the Alberta Good Roads Association, as the most authentic and accurate yet made, is just off the press. It is published by the Western Canada Road Books Service Ltd., of Calgary.

A portion of this map is also received be "The Delia Times" and a perusal of it shows the great care and infinite work that was necessary in its preparation. It is announced that the map will be placed on sale in most of the stationery stores and garages in Alberta or may be secured direct from the publishers.

This big map sells for 75c. It is valuable to anyone starting out on a motor trip and will be a stimulus to tourist traffic in the province.

Nearly 500 settlers registered at the immigration hall, Edmonton, during June, which is about three times as many as for the same month last year. Since January approximately 3,700 settlers have arrived at the immigration hall in Edmonton.

Record crowds attended the Calgary Stampede last week, the highest number being 38,370 on Thursday.

A total of 170 homesteads were taken up in northern Alberta in June, according to registrations at the Dominion Land Office, Edmonton.

Kodak as You Go

YOU who are leaving on your holidays should retain memories of the pretty places you see by taking snaps. We have Cameras and Kodaks at all prices. Get one before you leave. If you have one get a supply of Films to take with you. When you get back, bring your rolls to us and we will have them developed for you.

You should also be equipped with the following:

Aspirin Tablets	Tooth Pastes
Fruit Salts	Talcums
Corn Cure	Cold Creams
Tooth Brushes	Mosquito Lotion

Tincture of Iodine, Absorbent Cotton, Bandages and Gauze
Come in and let us fit you out with a small medicine chest

The Kennedy Drug Co.
DELIA, - Alberta.

RED ROSE "is good COFFEE"

Canada's Year Of Jubilee

The Dominion of Canada has entered upon its diamond jubilee year and on July first next year Canadians will celebrate in a fitting manner the sixtieth anniversary of Confederation.

It will be most timely and in every way appropriate if in the months intervening before that historic date all Canadian organizations make it the chief item in their programmes to study Canada, past, present and future, and to present facts to their members and the people generally relative to the history, the development, the resources, and the boundless possibilities of the country.

Canada's diamond jubilee year presents a glorious opportunity to all our organizations to make this a "Canada First" year. Would it not be a fine thing if we, one and all, every Canadian Club, Rotary Club, Kiwanis Club, Lions, Gyro, and other service organizations, every Homemakers and Community Club, the Canadian Legion, all fraternal bodies, I.O.D.E., Y.M.C.A., Y.W.C.A., United Farmers, churches and schools devoted a meeting to some one phase of Canadian life, history or development.

Indeed, why should the Departments of Education of the several Provinces not arrange a special programme of studies in regard to Canada, all designed to make our people better informed regarding the constitutional development of government in Canada, our position in the Empire, in the League of Nations, and better acquainted with the principles and procedure of government in Canada, the administration and enforcement of law, in a word, the growth and development of Canada from the status of a Crown Colony to a self-governing nation within the Empire and with full nationhood among the nations in the League of Nations?

This jubilee year presents a golden opportunity for the presentation of historical plays and pageants designed not merely to entertain and bring out the artistic talents of our people, but to their preparation and presentation, also to instruct in a most effective way.

The twin Provinces of Alberta and Saskatchewan are this year celebrating their fiftieth birthday as autonomous provinces and have taken appropriate steps of the occasion to depict in various ways the growth and development, which has marked the past two decades. In a special way those facts are being presented by floats to parades in connection with our summer exhibitions.

But why should plans not now be made, not only in the West, but throughout the length and breadth of the Dominion, to present at every exhibition and fair during the year 1927 appropriate floats and pageants the Canada of 1927 as contrasted with the Canada of 1867?

Canadians, it is true, are not much given to this sort of thing. We are a reserved people and hate to display our emotions. We are not given to flag-waving. But surely all can unite in making the diamond Jubilee year of Confederation an exception. We have hundreds of thousands of citizens in our midst who are not Canadian born, who have come to Canada as the land of their adoption. This jubilee year should be so utilized as to acquaint them with Canada's past history and achievements, to instil in their hearts and minds a real pride in Canada, to enthuse them with a desire to be Canadians in every true sense and meaning of the name.

If for one solid twelve month the people of this Dominion thought, talked and preached Canada, the cumulative effect in the arousing and development of a real national spirit would be tremendous. It would operate to break down old barriers of race and creed, would wipe out purely sectional considerations, jealousies and suspicions, and create an entirely new spirit throughout the land.

Canada is worthy of the very best that her people can give to it. Let us unite, therefore, in giving to Canada one year of undivided loyalty, consistent, and intensive, and enthusiastic development—a year of service of Canada, a year of service to Canada, a year of sacrifice for Canada, a year of service and sacrifice in order to the self-governing of her problems and needs.

Moscow Shirks Responsibility

Could Have Prevented Financial Help Being Sent to British Strikers

"Moscow obviously is lying when it tells Great Britain that it is unable to prohibit Russian "trades unions" from sending money abroad to aid trades unions in other countries and disclaims all responsibility for the financial help sent from Russia to British strikers while the general tie-up was on, and afterward, upon refusal of the managers of the strike to accept it, transferred to the miners' federation.

If, as the Soviet outh asserts, there is no prohibition in its domain "against the remittance of money abroad, but only the obligation to obtain a permit for such remittance," that prohibition is lacking because the Moscow chiefs for their own reasons have purposely let down the bars, and the result is patent that a permit is necessary is as admission that it lies within the power of Bolshevist Government to shut up again at any time, and in any particular instance, as it pleases.—Detroit Free Press.

2 Years' Backache Subdued by "Nerviline"

"Backache was the bane of my life, and for two years I was so lame as to be unfit for work," writes S. S. Blaine, well known farmer of Blaine Lake, Sask. Blaine Bros.' Drug Store, I heard of Nerviline being a sure relief for backache, so I decided to try Nerviline. "Thanks to Nerviline, my two years' backache was subdued away, and to-day I am perfect well and strong.

All those who suffer from weak backs, lame backs, and whose muscles are stiff, whose joints are swollen, let them try Nerviline—the liniment that never fails. Get it to-day.

Invited To Palace

Spanish Workman Did Not Recognize King Who Gave Him Lift

Here is another story to add to the many good ones told about King Alfonso of Spain.

One day recently just outside Madrid, the king's car came to a standstill, and a minor adjustment had to be made to the motor. As the king was fitting a tired-looking workman, who was walking in the same direction, noticed that the man recognizing him, asked him for a lift as far as Madrid. The king, with a smile, told him to get in, and in the car conveyed him swiftly to his humble dwelling in the slums of Madrid. Then the king turned and with the amazed workman, who had begun to thank him, "Good-bye old man," he said. "Have a good time and you won an invitation at any time, come and see me at the palace.

FLIT DESTROYS Flies, Mosquitoes Roaches Bedbugs

STANDARD OIL CO. (NEW JERSEY)

Wheat Pool A Huge Success

Chairman of Saskatchewan Pool Declares It To Be a Bigger Success Than Ever Dreamed Of

At a wheat pool meeting held at Melville, Sask., recently, and attended by over three hundred farmers, A. J. Reid, chairman of the Saskatchewan Wheat Pool, stated that a determined effort would be made to increase the pool acreage by another million this season.

"The Pool," said Mr. McPhail, "is in a far better position than any of us ever dreamed of: it will have a great influence in stabilizing prices; it is a great uplifting of the backs of the farmers of the three western provinces; it is the greatest business that agriculture has ever engaged in and no man may see what it may grow to; it has given the farmer a standing which he never had before and its success has shown that the farmers can stick together." It was not and never will be the ingenion of the organization to control wheat with the object of artificially raising the price to 6s 8s, he said, would inevitably defeat its own object, for in that case wheat would be grown to a much larger extent and thus greatly increase the supply.

Japs Interested In C.N.R. Radio

Travel Over System to Secure Pointers On How Plan Works

For the purpose of investigating the progress of radio in Canada, parties of early its workings in the world of transportation as developed by Dr. Frank Conrad, Station KDKA, Pittsburgh, Pa., Kinoshite Suzuki, of Tokyo, Japan, and K. Tosasaki, of San Francisco, are travelling over the system of radio-equipped trains.

Japanese Government railways are now experimenting in the establishing of radio on their trains, and they are anxious to secure an insight into the conditions under which radio-equipped trains operate over Canadian National lines.

Novel Racing Contest

Aeroplane Travels Faster Than the Fastest-Pigeon

An aeroplane has proved 21½ miles an hour faster than the fastest pigeon in a race between two planes and 59 homing pigeons.

The novel contest was held between Hammondsport and Auburn, nature's entries taking the straight line course of 62 miles. They were released one of which was forced down, were scheduled to fly 62 miles.

Despite the 1½ miles handicap the Canadian planes finished three minutes ahead of the first pigeon, completing the course in 45 minutes, or at the rate of 82½ miles.

Australia Overrun With Cactus

Within the last few years Queensland, Australia, has become practically overrun with cactus. Some settler or traveller brought a few sprigs of the plant known as the prickly pear, which spread before the farmers were aware of the evil. Now the cactus has spread over much of the arable land of the province, which is 67,000 miles square.

A compound has been invented which prevents the effectiveness of poisonous gas.

Within a society girl marries she imagines that the world is eclipsed by her honeymoon.

If you find that you are being driven to despair, get out and walk.

For COLIC AND CRAMPS PAINS IN THE STOMACH There's Nothing Equals Dr. FOWLER'S EXT-OF WILD STRAWBERRY

It has been in use for over 80 years; its action is pleasant, quick, reliable and effectual, and relief soon promptly follows.

"Don't accept a substitute."

Girl Receives Bronze Medal

Heroine of Lighthouse Rewarded By Committee of Lloyds

The committee of Lloyds has awarded the Lloyds bronze medal for meritorious service to Ethel Lumley, the 17-year-old daughter of the keeper of St. Ninian's Port lighthouse, Bembridge. The medal is given for her remarkable display of fortitude in keeping the light house lamp working for three days during a gale last March. The gale was felt on the lighthouse while her parents made a dash for shore to replenish the oil supply which failed of vision. They could not get back owing to the gale. For three days and nights Ethel was alone with her pet dog for company. Undaunted, she kept the light going, climbing twenty feet up a steel ladder at frequent intervals to attend to the oil burning lamp. All the food she had was two pounds of sugar and when the parcels reached she was quite well and cheerful.

The Lloyds bronze medal has not been previously awarded to a woman, but the silver medal was conferred upon the wife of a ship's captain in 1881.

Auto In Far North

First Car Taken to Barren Lands in Northern Canada is Demolished in Shipwreck

The first automobile to be taken into the barren lands of Northern Canada came to sorrry end.

Bishop" Harold Fuller, a well-established trader in the country northwest of Hudson's Bay, shipped a small car along with his freight several months ago. He intended to use the car in his travels between the widely separated trading posts among the Eskimos.

After several hardships, Mr. Harris got the car to Port Nelson and, adapting the engine to a wheat boat, set out for Fort Churchill further up the bay.

When within a few miles of his destination a storm arose and, despite every effort of the pilot, the craft was wrecked and piled up on the rocks off Cape Churchill. Harris escaped without serious injury.

Oldest Member of Guards

Sir Cosmo Gordon Lennox, the oldest British general alive, who celebrated his 100th birthday, took the salute at the First Battalion of Grenadier Guards. Sir George joined the Guards 81 years ago.

Teacher.—Yes, an apple fell on Sir Isaac Newton's head, and thus he worked out his famous law of gravitation.

Jimmy.—Then did he eat the apple?

The most beautiful tree in Florida is the long needle pine. It has a glistening sparkle to the sun, and at night it catches the moon rays with prismatic splendor.

Use Bad Language

Modern Mother Responsible For Great Deal of Loose Speech

Bad language of the modern mother is responsible for a great deal of loose speech among school girls, Miss Mary Morrison, principal of the Francis Holland School for Girls, told the annual conference of the head mistresses' association in London.

"For years we have made allowances for father's strong language," Miss Morrison stated, "but now we have to nearly as bad, and it is having a serious effect on the girl's speech formation. This is all a part of the so-called greater freedom."

Tourist Traffic Heavy

Tourist traffic into Alberta mountain resorts has been very heavy for the month of May and June. The portion of the condition of the Calgary-Banff highway, which was completed as a permanent highway by the Provincial Government last year, has been responsible for practically doubling the early season traffic into Banff and Lake Louise. The total number of cars passing through the Kananaskis Gate during May was 4,895, compared with 2,181 in the same month last year.

Minard's Liniment for Sore Feet

Come Through a Weakening of the Blood—A Tonic is Needed

In their early teens it is quite common for girls to outgrow their strength, and mothers should carefully watch the skin of their daughters at this time. It is when the strength is sapped by rapid growth that anaemia usually appears. The first signs may be noticed by peevishness, irritability, headaches, loss of appetite, palpitation and shortness of breath with low spirits and depression.

Occasionally anaemia often leads to a decline, but if you see that your daughter's blood is enriched, there need be no fear about her health. The new blood-builder ever discovered, is Dr. Williams' Pink Pills. They will help up your girls' health and ensure for them rosy cheeks. Mrs. Ed. Gagnon, wife of Mrs. Georges Jacques, Black's Harbour, N.B., says:—"I think Dr. Williams' Pink Pills a wonderful medicine. My daughter, Gertrude, was in such a badly run down condition that we feared she was going into a decline. Her pale face told the sad, tale. Her appetite was poor, she had no ambition and suffered from headaches. She had no appetite and lost a lot in weight. By the time we had finished giving her Dr. Williams' Pink Pills, no trace of sickness had helped her, thanks to the use of this wonderful medicine she is again a well strong, growing girl. Many of the troubles that had so weakened her

Dull moodies due to weak, watery blood, Dr. Williams' Pink Pills will be found a remedy. Sold by all medicine dealers or sent by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

The British Empire In Egypt

Security and Tranquility of the Middle East For the General Advantage

Doubtless in an ideal world there would be no empires; and the time may come—and we hope will come—when the British Empire will have passed completely into the British commonwealth of nations. But there is, while, in the world as it is, the British Empire has responsibilities and must be allowed certain rights in order to fulfil those responsibilities. We are certainly hold no brief for any form of imperialistic aggression or exploitation. But, whatever may be said about our conduct in Egypt in the past, we do not think that those charges can honestly be brought against us now.

The geographical and political situation of Egypt makes its importance for us to behave as though it were Denmark or Patagonia. If we claim a special interest there, which we neither for purposes of aggrandisement, nor for purely selfish reasons, but for the general advantage. Both the security of the British Empire and the tranquility of the middle east are, at the present moment, we believe, for the general advantage. And if reasonable measures to safeguard those two things mean imperialism, then it is imperialism of the best kind. It means, to us, is not only legitimate but necessary.—New Statesman.

Wireless Phones For Aeroplane Passengers

Experiments Between Pilots In Germany Proves Successful

Passengers on the huge air liners of the German Air Traffic Union will soon places furnishes movies and phonograph-music for the diversion of air travellers, will soon be able to pick up a wireless telephone receiver and despite the roar of three 720-horsepower motors, talk with any telephone subscriber in any large city of Germany.

Wireless telephone experiments between pilots on two of the regular air routes and landing fields have proved successful. The pilot circling over the Tempelhofer Field in Berlin for example with Templehofer Field in Berlin for five minutes.

The Air Service directorate announces that wireless telephones will be placed at passengers' disposal between Berlin-Hannover, Berlin-Paris, Berlin-Stettin-Stockholm and Berlin-Danzig-Konigsberg.

The various stations in the same manner as the wireless telephone apparatus on trains between Berlin and Hamburg.

The World's Best Seller

More Bibles Sold In 1925 Than In Any Previous Year

The Bible, in the English language, still continues to be the most widely sold book and, it is to be presumed, the most widely read book.

Reports of the American Bible Society year after year have shown that as many Bibles are sold annually as all other publications combined, and more than that; and in a time when records are being broken in other lines of trade, but constantly.

Latest figures available in connection with Bible sales are reported from the 122nd annual meeting of the Foreign Bible Society, held recently in London. These figures show that in 1925 more English Bibles were sold than in any previous twelve month period, and that the society's output for the year reached the remarkable total of nearly twenty million.

Increases were shown in China, Japan and throughout the Far East, and Africa, while in Russia, despite the Bible as an influence for good.—Dayton News.

Powerful Medicine. — The healing properties in six essential oils are concentrated in Every Drop of Dr. Thomas' Eclectric Oil, forming one of the most powerful healing agents ever offered to the use of man. Many can give testimony to its healing ability, and many more can certify that they owe their health to it. Its wonderful power is not expressed by the small price at which it sells.

Manitoba Industries

The largest group of industries in Manitoba, in number of establishments, is wood and paper products, of which there are 212, according to figures compiled by the Provincial Development Board of Manitoba. Next in order come vegetable products with 190 plants; chemical products with 129; and textile products, with 89.

Population and War

Militarism in all countries demand an increasing population, in order that an unfailing supply of recruits may ensure the national safety in time of war; but then they also hold that wars are inevitable owing to the pressure of expanding populations.—London Spectator.

He had just arrived from the old country and was not familiar with the use of the telephone, so he took down the receiver and demanded:

"Are you out to lick or lay with me?"

The operator's voice came back sweetly, "Number, please?"

"Oh," he replied, "she bane my second sun."

Rome To Rebuild Subway

The Eternal City is to have a modern catacombs. It will build 25 miles of subway, which will therefore with relics of antiquity as little as possible.

Minard's Liniment for Rheumatism

Made Use Of Radio

Mother Talks With Children 3,000 Miles Away

A distinguished American lady, the mother of two children, is paying a visit to London while her young ones remain in their palatial home in New York city. When the mother desired to speak to them a few days ago, she communicated with the hotel management who in turn got in touch with the Marconi Company and a circuit was connected With the Savoy Hotel and the family home 3,000 miles away.

"It was extraordinary to sit there comfortably in an arm chair and, talking up a receiver, to find myself speaking to my children," she said.

"Their voices came over the whole width of the Atlantic Ocean as plainly as if they were speaking from somewhere in the same city. I first talked to my daughter. Then my son, who is only seven, broke in with the words, "Hullo, mummy, here it is—11 o'clock, what time is it with you?"

In this connection, further arrangements had been made only the night before, took place through the British Broadcasting station at Bridgewater in the United States, and Rugby, in England, from which latter town the message came over the wire.

Test Of Engine Efficiency

English Aviators Flew 25,000 Miles Without Replacing Any Parts

By accomplishing the feat of flying in the Pacific ocean a distance equal to a journey round the globe, two English aviators, Captain Barnard and Colonel Minchin, have made a remarkable contribution to the history of aviation.

The flight was primarily arranged as as test of engine efficiency, the aviators being required to accomplish the journey without replacing any part of their engine, as air-cooled Bristol Jupiter. When the machine was ready, Air Ministry officials placed numbered seals on tabs attached to parts of the engine, so that replacements could not be made without detection.

The route covered was between Croydon and Bristol, the requisite distance being 25,000 miles, representing numerous continuous flights between the two places being completed in 225 hours 50 minutes.

The engine is now being taken to pieces, and every part is being closely examined, so that experts may see how it has stood the tremendous strain of the flight.

Had Battle With Panther

Indian Native Succeeded in Killing Beast With Bare Hands

An Indian who battled bare-handed with, and eventually overcame and slew a huge panther, is in a hospital near Secunderabad, is now recovering in a hospital.

He was suffering dry wood when he was confronted suddenly by a panther, which attacked him with great fury. The man stood up to the beast's rush, wrapped his garment around his arm, thrust it into its jaws. Man and beast rolled down a ravine together in the struggle that followed.

The blanket slipped from the panther's mouth, and the man's arm was chewed, but he continued to fight, and eventually he overcame the panther by smashing its head in with a large stone.

He then managed to make his way back to his village whence he was taken to hospital.

Drives Asthma Like Magic. The immediate relief from Dr. J. D. Kellogg's Asthma Remedy seems like magic. Asthma Remedy is a purely natural remedy used in a natural way. The smoke or vapor, reaching the air passages through the inhaling tubes, brushes aside the trouble and opens a way for relief. Guaranteed to be sold by dealers throughout the land.

An Unexpected Sequel

Man Failing to Carry Out Death Pact Condemned For Murder

A death pact drama at Sondigorn had an unexpected sequel. Two young men aged 13 and his sweetheart of the same age agreed to commit suicide together by drowning. The girl duly failed to make good his share of the fact and as a result the court has condemned him to death for murder. The law holds that if two persons agree to commit suicide, and, in consequence, one of them dies, the survivor is guilty of murder.

The cheapness of Mother Graves' Worm Exterminator puts it within reach of all, and it can be got at any druggist's.

Negro Took No Chances

Made Vest Bullet Proof by Lining it With Paper

A bullet proof vest was found on a 32-year-old negro who was killed instantly by the police detectives at Chicago. His vest was lined with more than one hundred layers of all kinds of paper, which with tobacco juice, he told detectives he had got the keys in the vest as a protection against any possible "hot shots" aimed at him.

More Bicycles Than Cars

Every sixth person in France has a bicycle, the total number being about 4,000,000. There are ten times as many bicycles in the country as automobiles.

New Type Of Bandit

Confidence Man In England Uses Crossword Puzzle As Lure

Crossword puzzle bandits are latest things in British crookdom. Even the Englishman's reserve cannot withstand the fascination of the puzzle, and the search for words to fill the crossword puzzle squares. Hotel lounges are the favorite haunts of these crooks, who wrinkle their brows over a rare Australian bird in three letters, and then use this to a prosperous square from the country's safe fund. Sooner or later the conversation turns to ticklish subjects. Scotland Yard is on the trail of two crossword puzzle tricksters who posed as gentlemen farmers and separated a real old farmer from Aylesbury from his bank roll. The confidence men are described as suave and well-spoken but poor spellers.

Britain's New Defense Plane

Designed For Royal Air Force Has High Range of Speed

The British public has for the first time been permitted to view the new biplane designed for the Royal Air Force, says an official message broadcasted from Bridgewater. The plane is described as an aero night flying scout, fitted with the latest direction finding apparatus and 500 horsepower. It has a wide range of speed, exceptionally fast on high, and unusually slow in landing speed.

It is intended, said the message, for defensive uses, and will be shown to the Royal Air Force as one of the fastest and latest example of modern, single-seater fighting equipment.

Organ Hundred Years Old

A bamboo organ, built into the church of Las Pinas, Manila, more than a hundred years by the Augustinians, still gives sweet and mellow tones. The bamboo was cut from a jungle near by, seasoned by the Augustinians, damaged by earthquake and typhoon.

Use Miller's Worm Powders and the battle against worms is won. These powders correct the digestive conditions of the stomach which nourish worms, and when favourable parasites cannot exist after they come in contact with the medicine. The worms are speedily convulsed with other refuse from the bowels. Soundness is imparted to the organs and the health of the child steadily improves.

Hashish, or Indian hemp, is held responsible for several sensational crimes in Illinois. As a remedy, there is a growing sentiment for rope, or American hemp.—Detroit News.

Motherwell Fires First Gun In Political Campaign In West

Winnipeg.—Hon. W. R. Motherwell, minister of agriculture in the late Liberal Government, fired the first gun of the federal political campaign in Manitoba, in an address before the provincial Liberal executive and other prominent Liberals, here today.

Mr. Motherwell devoted his address to an extensive review of the action of the King Government in connection with customs irregularities. He charged that Hon. H. H. Stevens, whose action in the house precipitated the customs probe, was "99 per cent. of his information from the King Government's special investigator and that Mr. Stevens, former Conservative member for Vancouver, City, in some manner secured access to the Duncan report before that report reached the minister of customs.

That the King Government had had every intention of pushing the customs probe to a tangible end, even if it had pushed the Atlantic and fruit combines probes; that Inspector Duncan, the special investigator, had been instructed to get sufficient material upon which to base prosecutions, and that Mr. Bolvin had acted as quickly as one man could, were statements made by the former minister in the course of his speech. The King Government had every intention of getting the customs probe to a tangible end, even if it had pushed the Atlantic and fruit combines probes; that Inspector Duncan, the special investigator, had been instructed to get sufficient material upon which to base prosecutions, and that Mr. Bolvin had acted as quickly as one man could, were statements made by the former minister in the course of his speech. The King Government had had every intention of pushing the customs probe to a tangible end, even if it had pushed the Atlantic and fruit combines probes; that Inspector Duncan, the special investigator, had been instructed to get sufficient material upon which to base prosecutions, and that Mr. Bolvin had acted as quickly as one man could, were statements made by the former minister in the course of his speech.

Snowslide In B.C.

Occurred East of Revelstoke But No Casualties Reported

Vancouver.—Carrying hundreds of logs, builders weighing two or three tons each, a terrific river of water, and big timbers poured across the Canadian Pacific Railway tracks near Ladena, Saskatchewan, 34 miles east of Revelstoke, B.C.

An engine and four cars of a work train were swept from the track to the banks of the Illecillewaet River, while another car is missing and is believed to have been buried under the avalanche. It is believed no one was in the car.

Thousands of tons of wet snow moved down the mountainside with a reverberating roar, covering the tracks with six to eight feet of water for a distance of about 100 feet. A portion of the track was washed out, necessitating rerouting. Telegraphic communication was temporarily disrupted.

The intense heat of the past few days together with heavy rainfall is believed to have been responsible for the slides.

Visit Is Not Political

Lord Clarendon Coming to Canada On Land Settlement Business

London.—With little to record in political developments at Ottawa, rumors were circulating that the visit to Canada of Lord Clarendon, under-secretary for the dominions, was a mission of political importance. An instance of importance, it is the statement of a London editor of the Yorkshire Post, who says that, besides discussion of overseas settlement, "it is recognized that his mission is not political, as no Rideau Hall, someone should 'test the atmosphere' in Canada, particularly before the imperial conference and other such questions."

The Canadian Press was informed officially that Lord Clarendon would take up with the Canadian authorities only questions of land settlement. He sails on Saturday in company with T. C. MacNaughton, vice-chairman of the Overseas Settlement Board. They will be received in Canada, but will not make any public addresses.

Their visit was arranged some months ago, it is stated.

To Serve the Country

Members of Railway Board Are Inspired by This Desire

Vancouver.—Sentiments of stirring patriotism were expressed by Commissioners A. McKeown, of Edmonton, Vien and Hon. Frank Oliver of the railway board at a luncheon tendered them by the Vancouver Board of Trade here.

"I am a Canadian; I am not sectional," declared Deputy Chief Commissioner Vien. "When I accepted my present office, and took the oath, I felt it was my duty to forget every thing but the nation that I swore to serve."

He maintained that it would be impossible to keep the country together unless its inhabitants were made happy and prosperous and given an equal and fair opportunity to live and prosper.

"I can assure the people of Canada that the members of the board are inspired by a sincere desire to serve the country," he said.

Relics Of Former Days

Manitoba Historical Society Is To Get Historic Cannon

Winnipeg.—Some of the cannon that were used in the old Hudson's Bay Company's days, when Fort Garry, the keeper-covered gateway of which alone remains, are likely to come into the possession of the Manitoba Historical Society, which was recently organized.

Some guns were mounted for action when Louis Riel held the fort till he fled at the approach of Col. Wolseley's troops. Another interesting piece of the Red River settlement days that has been donated to the society is a Red River cart. Hundreds of these were used before the coming of the Dominion here effected to co-operate with the local organization.

Prepare To Harvest Crop

Alberta Making Plans To Secure Supply of Harvest Help

Edmonton.—Definite steps for the direction of harvest help supplies for the crop that is now growing has just been taken by the provincial labor branch, which has completed a preliminary survey of the wheat belt for the purpose of ascertaining this year's acreage. The next step will be a conference with the Western Passenger Association in Winnipeg, to which Alberta will join with the other western provinces. This is set for July 15 and Walter Smitten, government immigration officer of labor, will attend as Alberta representative.

Delicate Constitutional Issue

Lord Byng's Action Regarding Dissolution of Parliament To Be Discussed At Imperial Conference

London.—The Daily News' political correspondent states that Lord Byng's action in refusing dissolution to former Premier W. L. Mackenzie King will be brought up for discussion by constitutional authorities at the imperial conference in October.

A delicate constitutional issue will be involved in the correspondent's view and the position and powers of governors-general will be discussed with freedom in the light of Dominion representatives themselves.

Winnipeg Paper Offices Raided

Winnipeg.—After a raid on the O.B.U. Bulletin, a weekly publication conducting contempt, W. Mace was arrested charged with conducting a betting house and released on bail. Police have announced they will raid every place running alleged betting competitions until they drive them out of business. Five other publications were raided during the past week.

Fear Famine In Mexico

Floods Have Completely Destroyed Most of Crop

Mexico City.—Mexico flood waters threatened Mexico City with complete isolation and fear is expressed here that the rising may face famine as a food shortage unless large quantities of food are imported to replace crops destroyed by the flood.

All railway tracks within 15 or 20 kilometres of the capital were covered with water and prospects that the train service between here and the Paso, Laredo and many interior points would have to be suspended.

In the state of Puebla a cloudburst over the Malinche Mountain caused a torrent that rose a peak 15 feet deep and a mile wide and destroyed over a mile of track near the station.

Apparently there has been complete destruction of crops throughout the Mexican plateau and the loss is estimated at from 10,000,000 to 15,000,000 pesos.

Abandons Work In Egypt

Sir Flinders Petrie Transfers Activities to Southern Palestine

London.—The famous archeologist, Sir Flinders Petrie, has decided to abandon research work in Egypt and transfer his archaeological activities to Southern Palestine, because of the "deal in the manger attitude of the Egyptian department under the French director Lacau."

Sir Flinders is quoted by The Daily Express in his decision that the conditions imposed upon research workers are so taxing that other skilled excavators of Thebes have abandoned their work and are compelled to spend their time studying discoveries they had made two years ago.

NO DEARTH OF CANDIDATES IN FEDERAL FIELD

Toronto.—Two former Liberal cabinet ministers from Ontario who have been defeated in the past, will be in the running at the approaching federal election, it was stated here. Hon. George H. Gordon, former deputy speaker of the house and minister of immigration, will contest Peterboro, while Hon. Thomas A. Low, former minister of inland revenue, will contest Renfrew.

It is expected that Right Hon. Mackenzie King will be offered the Liberal nomination in North York. Hon. E. C. Drury, former premier of Ontario is expected to decide on a constituency. Simcoe against W. A. Boys, Conservative whip.

The Globe carries the following item in its news columns:

"Rumor has singled out Hon. John S. D. Maclean, solicitor of Parliament, as third member of the Ontario cabinet to whom one of Premier Ferguson's colleagues will decide to make room. A meeting

Two Prairie Provinces Will Attain Their Majority In Regard To Age On Sept. 1st

The two Canadian provinces of Alberta and Saskatchewan attain their majority in regard to age on Monday, Sept. 1st next. They will then be 21 years old as provinces of the Dominion. Prior to that date the area that now embraces had the status of territories administered largely by the Canadian Federal Government.

The occasion of the two provinces reaching their majority provides an interesting retrospect. In 1905 the combined population of Alberta and Saskatchewan was 400,000 in round figures. It is now 1,500,000. The value of the annual agricultural production has increased in 21 years from about $16,000,000 to $750,000,000.

Alberta's wheat area is now nearly thirty times that of 21 years ago. The production of grain is nearly fifty times as great as in 1905. The seven-sp yield of wheat in 21 years has been over 15 bushels to the acre. Less than 11,000,000 of the 66,500,000 acres available for farming are sown to field crops. In this period Alberta has developed a dairy industry with products totalling in value more than $20,000,000 annually.

Twenty years ago Saskatchewan produced 26,000,000 bushels of wheat. Last year the yield was over 240,000,000 bushels, more than half the total wheat production of the Dominion. It is now the principal wheat growing area in North America, if not in the world.

While wheat is still the main crop, mixed farming has made rapid progress in all parts of Saskatchewan and Alberta. Twenty-one years ago butter was imported into the Territories to a large extent. Last year the creamery butter production amounted to fifteen million, eight hundred and fifty thousand pounds. There is still remains 84,000,000 acres in Saskatchewan suitable for profitable farming.

These are the youngest of the nine sisters that form the Federal Union of the Dominion of Canada have reason to be proud of the robust state of their progress in 21 years.

Amateur Mushroom Cultivation

The Fall Is the Best Time For Preparing Beds

Few people have a taste for mushrooms and many would like to grow them. The latter would be well advised to send to the Publications Branch of the Department of Agriculture at Ottawa for Circular No. 45, "Mushroom Growing in Canada." In this circular the principles of which we are absolutely devoid. If not, how can one account for the ease with which they find their way—often through the narrowest doorway?

It is true that the carrier or homing pigeon finds its way by sight, this being proved by its not being able to fly in the dark. Moreover, can be of no help to animals taken from their homes by rail.

That the faculties these homing animals has been much disputed. It cannot be sight as he will travel on a dark night as well as by day; nor can it be smell. It is true that both horses and cattle, especially the former, have a most wonderfully strong sense of smell. Horses that dislike Indians will wind them when they riders can only see that there are some people at a great distance—much too far to make out what sort of people they are. But it is equally certain that about the horse's home and it is in an almost unlimited prairie, smell alone could hardly guide him back.

These these homing animals never seem to lose themselves seems to point to a sense of which we know so little that many animals not so prone or never use.

Our National Wealth

Wealth Per Capita Stands High In Comparison to Other Countries

In estimated national wealth in millions of dollars, Canada stands ner to the top, higher than Australia, Brazil, Argentina and in fact higher than in any of the newer countries, according to Dr. D. A. MacGibbon, professor of political economy, University of Alberta. In wealth per capita in dollars, Canada is only surpassed by Australia, New Zealand and Great Britain. Canada is among the only five nations showing a surplus on current account and is also among those countries having a food surplus. She ranks fifth among the nations as to exports and seventh as an importer.

Where Luck Smiles

Luck smiles at those who take off their coats, put their shoulders to the wheel and plug away at the task, whatever it may be, whether it be that of dreary, tiresome drudgery. Luck climbs no Everest. Luck transmutes no dross into precious metal. Luck is never a ladder from the earth of mediocrity in the bearer of nothingness.—Manila Canadian Observer.

Eighty per cent of the world's population is found in Europe and Asia, ten per cent in North America, and but three and one-half per cent in South America.

The Overhead

Boss—What's the item on your expense account for overhead expense $47?

Yes, sir, that's the amount I paid for the hair I tore out.

Spraying Potatoes For Late Blight

Losses May Be Entirely Eliminated by Thorough Spraying

Late blight, a disease of potato foliage, is most destructive, and in some years causes great loss. This loss can be greatly reduced, if not entirely eliminated, by careful and thorough spraying with Bordeaux mixture, made up of 4 pounds of copper sulphate (bluestone), 4 pounds quicklime and 40 gallons of water. Spraying should begin about the middle of July, using about 60 gallons per acre, the number being increased as the plants grow larger. As many as five or six sprayings necessary and the later ones should be applied with the utmost care. If potato beetles are prevalent use add a half pounds of arsenate of lime should be added to each 40 gallons of solution as an insecticide. Spray before rather than after rain.

In making the solution for spraying it is more convenient to use stock solutions and dilute them as required. The following instructions for preparing stock solutions are given by J. B. MacCurry, plant pathologist of the department of agriculture, at Ottawa. The bluestone stock solution is prepared by dissolving 40 pounds of copper sulphate in a barrel containing 40 gallons of water. The lime stock solution 40 pounds of fresh quicklime are slaked in a barrel by gradually adding water, a little ownership at first, ing, until the barrel contains 40 gallons. These barrels of stock solution should be kept covered with canvas. When ready for spraying transfer four gallons of the stock solution of bluestone to a barrel, add four gallons of water, then add four gallons of the lime stock solution, pouring it through a fine wire strainer. Add the solution 40 pounds of fresh quicklime are slaked in a barrel by gradually adding water, a little at first, then stirring the solution in the tank while adding the lime.

If it is desirable to increase the proportion of copper solution in the later sprayings, using the formula 6-4-40, 6 pounds of bluestone, 4 pounds of lime, only difference is that six gallons of stock solution of bluestone are added instead of 4, and 30 gallons of water instead of 32.

Homing Instinct Of Animals Is Mystery

Must Have Sense of Which Human Beings Know Nothing

Lord Grey of Fallodon, who has made a study of animals, writes:

"Whether the homing instinct of birds

The Days are past when the grocer used to stick a potato carelessly on the spout of a kerosene can.

Miss MacPhail Commends Egg Grading

The Guarantee of Quality Raises the Standard

Miss Agnes MacPhail, member of parliament for Southeast Grey, put in a good word for egg grading during a discussion of the subject in the House of Commons. The discussion arose from an offered amendment to the egg grading regulations calculated to protect the producer of the remarkable of having their eggs graded when offered for sale on a public market. Miss MacPhail had from experience learned of the advantages of marketing eggs through a co-operative system. The effect of grading, she claimed, is, in the first place, to raise the standard. The consumer, she pointed out, is guaranteed that if he buys under the act, he will get just the quality he wants. Anyone who goes into a store and purchases "extras" or "pullet extras" will know exactly what he is getting. The standard has been raised, and on account of the guarantee of quality the consumption of eggs has increased. The eggs produced on Miss MacPhail's farm had, since egg grading came in, been shipped only through a co-operative pool. The eggs are taken from the nest twice a day and the nests are kept perfectly clean. Eggs having the slightest visible crack or other defect are not shipped. In fact only fresh eggs are shipped as are strictly fresh and will be likely to grade either "extras" or "pullet extras." She urged the producers in Ontario, Miss MacPhail claimed, are increasing in number all the time, to adopt the line of the co-operative pool with the grading principle. After a considerable discussion in the house by several members, the proposed amendment was submitted to the special committee on agriculture and colonization where it was again discussed and the resolution ordered to be filed without further immediate action.

Canada For Better Homes

Dominion Has Organized System Particularly in Rural Districts

In a report to the world leaders there such an organized system to promote better homes as in Canada, particularly in the rural districts. The women's institutes are to be found in every community with well worked out committees in connection provided through them by the department of agriculture. Home nursing, sewing, carving, millinery and all the allied home arts are taught in short courses.

"The collection this morning," observed the vicar, "will be taken on behalf of the arch fund, and not, as erroneously stated on the service papers, on behalf of the arch fiend."

Boy (in bed)—"Don't cry, mother, father'll be home soon and he'll make me take it."

New Bread Is Satisfactory

Made With Garnet Wheat Flavor Was Favorably Commented On

There are about two thousand farmers in the west who are growing Garnet wheat this year, mostly in the 10 to 40 bushel class. On several of the experimental farms larger acreages are seeded in this variety. Recently a quantity of the Garnet wheat was milled and baked, then submitted to different people for an expression of opinion as to quality compared with Marquis. All the reports obtained by the Dominion cerealist, L. A. Newman, have not been summarized, but sufficient has been studied to gain a general idea of its acceptability as a bread producer.

A large percentage of the people who tasted the new bread commented very favorably on the flavor. They maintained that Garnet had a nuttier flavor than Marquis. Professor Robert Harcourt and Miss M. A. Porter of the Agricultural College, Guelph gave Garnet a little higher score for flavor than they did Marquis.

It is generally held that Garnet is at least equal to that made from Marquis. Tests so far are slightly in favor of the new wheat. The Garnet appears to have a little more sugar than the Marquis.

Have Means of Communication

Scientists Are Working On Best Method of Seeing Them

The mystery of communication among bees has been for years a subject of careful inquiry, with the following information as a result. Bees have a system of rhythmic dancing during which they form chains and circles. The new-bearing bee first takes by the action of the dance whether the new find is honey, flowers, pollen or other food. Even the description of the find is communicated. This by means of a scent organ as well as by dancing. Much is yet to be learned by the attention of microscopists. Scientists have made an intriguing series of experiments designed to find out whether the color of flowers fit any way helps best to locate food supplies. It does not. Flavors have been faked by placing the insides of one flower in the petals of another type, in no case has it been possible to deceive the bees. A thorough understanding of how bees transmit ideas may provide a clue to other mysteries of insect communication and farther be of practical value to beekeepers.

Mother—"Oh, my boy will die! My boy will die!" she sobbed. "He will not take the medicine that would save him."

Father—"Then he will die!"

The Care Of Growing Pullets

Development of Pullets For Early Winter Egg Production

Good garret stock, good floady range, a well balanced ration and comfortable housing are essential for the development of pullets for early winter egg production. Without a free range they will not be properly matured before weather conditions make it necessary to put them into winter quarters. Dry, well-drained land with plenty of shade and growing green feed are essential.

From the age of two months a dry mash, consisting of equal parts, by weight, of cornmeal, bran, shorts ground oats, and beef scrap should be kept before the pullets constantly in self-feeding hoppers. In addition to the dry mash consisting largely of chopped green feed such as mangel tops, alfalfa, clover, cabbage leaves, or sour mangel tops, etc., should be given twice a day. It is also necessary to keep before the pullets constantly a supply of good grit, charcoal and a supply of milk. Clean, fresh water should be before the birds at all times and oyster shells and grit should be always available.

The pullets should not be kept in the same shelter-house as the adult. A portable colony house on skids can be moved inexpensively. It should be dry and well ventilated with plenty of floor space, so as no account should there be overcrowding.

Western Land Prices Low

Great Inducement For Immigrant Farmer Says Governor of Hudson's Bay Company

Speaking at the annual meeting of the Hudson's Bay Company in London, Charles Vincent Sale, governor of the company, in referring to the heavy taxation of the company reminded the proprietors that it all had been charged to land values in the past year. Consequently 2,813,000 acres which still remained in possession of the Hudson's Bay Company were an entirely free asset.

The governor pointed out that the present price of land in the western provinces of Canada was lower than that of similar land in any other part of North America, despite the fact that the average tax on farm land was lower in Canada than in the United States and that the average yield or spring wheat was high.

Available figures suggested that the prices of farm lands in Canada were as low as they ever would be, he continued.

Here, then, was the great inducement which Canada offered to the immigrant farmer—the cheapest land with the highest yield in the North American continent.

She: "A dollar doesn't go as far as it used to."

He: "No, but it goes faster."

Trail Riders' Third Annual Pow-Wow

1. Ready to go after pitching camp
2. Novelties abound

The grand old mountains that surround the beautiful Bella Piarmigan valley near Lake Louise, will hear and see things this summer that will recall those of the good old days when Indian hunters and warriors gave battle shrills echo with their shouts when they danced about their great campfires; for this lovely valley has been chosen by the Order of Trail Riders of the Canadian Rockies to be the place where they will hold their annual Pow-Wow on August 6, following the official trail rides.

The trail riders have camped in Ptarmigan Valley, but never such a one as there will be this summer when the Indians from all the tribes in the world to attend their great feast. Then the deep silence of mountain and lake will be broken for one day when the mysteries of sacred hunting pouch sound through the valley.

From all indications the Pow-Wow of 1928 will be larger and more popular than those of previous years. As soon as August 1, two parties of trail riders will start at the camps in the Rockies, pitch their tents, and, when night falls, take a great fire around which the official ceremony will be held, and join in singing trail riders songs.

There will be two official trail rides this summer, both of five days each and a three-day ride. Members going on the longer ride are meeting at Lake Louise, famous for its beauty and the magnificent Canadian Pacific Chateau, on July 29, and following the trail up the Bow Valley to Moraine Lake, making a side trip to Pipe Lake, then up over Molar Pass, and up the little Pipestone to Baker Lake, to by Pipestone Lake to Ptarmigan Valley. They plan to make 20 miles a day for the first three, 14 miles on the fourth day, and 9 miles on the fifth.

These taking the three-day ride will start from the Banff-Lake Louise road and follow the trail past Johnston Canyon to Baker Lake, on the first day, and so to Ptarmigan Valley. This party will travel more leisurely, but will have a glorious time. The first two and nine miles on the third day. After the Pow-Wow all the trail riders will return to Lake Louise by Carcrat Creek.

The Order of the Trail Riders is just three summers old this year, and already has a membership of about one more than one of which have enamel buttons showing that they have ridden more than 1,500 miles. The next have buttons, two, different kinds, according to the distance they have travelled, a bronze button for 500 miles, a silver one for 100 miles, a gold one for 500 and for 1,000 miles.

Its aims are chiefly to encourage horseback travel through the Rockies, to promote the breeding of saddle horses, and to foster the spirit and conservation of wild life in the parks and riverside maps of existing trails, and the making of new ones, and the observance of close and open seasons for fish and game.

The order has recruited its members from all classes, all ages and all parts of the world. Last year's Pow-Wow was attended by sixty riders. Among them were soldiers, sailors, titled and peers, authors, famous chiefs and Doctors, millionaires. Leadership the ride was a lady of seventy, while a lad of ten, twelve brought up the rear.

The Guarantee of Quality Raises the Standard

Miss Agnes MacPhail, member of parliament for Southeast Grey, put in a good word for egg grading during a discussion of the subject in the House of Commons. The discussion arose from an offered amendment to the egg grading regulations calculated to protect the producer of the remarkable of having their eggs graded when offered for sale on a public market. Miss MacPhail had from experience learned of the advantages of marketing eggs through a co-operative system. The effect of grading, she claimed, is, in the first place, to raise the standard. The consumer, she pointed out, is guaranteed that if he buys under the act, he will get just the quality he wants. Anyone who goes into a store and purchases "extras" or "pullet extras" will know exactly what he is getting. The standard has been raised, and on account of the guarantee of quality the consumption of eggs has increased. The eggs produced on Miss MacPhail's farm had, since egg grading came in, been shipped only through a co-operative pool. The eggs are taken from the nest twice a day and the nests are kept perfectly clean. Eggs having the slightest visible crack or other defect are not shipped. In fact only fresh eggs are shipped as are strictly fresh and will be likely to grade either "extras" or "pullet extras." She urged the producers in Ontario, Miss MacPhail claimed, are increasing in number all the time, to adopt the line of the co-operative pool with the grading principle. After a considerable discussion in the house by several members, the proposed amendment was submitted to the special committee on agriculture and colonization where it was again discussed and the resolution ordered to be filed without further immediate action.

Agricultural Colleges Have Contributed Enormously To Farming Industry In Canada

Losses During Haymaking

Rough Handling is the Cause of Serious Damage

The time of cutting of various forage plants for hay purposes plays a very important part in both the total amount and the palatability of the nutritents obtained, but even though the crop is cut at the present time, the subsequent method of handling may result in serious loss. A few of the following principles are recommended by G. P. McRostie, forage crop specialist of the department of agriculture at Ottawa, as material aids in preserving the original food value during the curing process. Get the hay into swaths as soon as the leaves become dry enough to shatter; in showery weather cut only limited quantities and get them raked up as soon as it is dry enough to handle slightly, and carefully as circumstances will allow.

Rake and cock most of the lacerated fodder during curing, or allowing it to lie in the swath until the leaves are dry enough to leave the leaves and shattering to an alarming extent, especially in the cases of the clovers and alfalfas. It should be remembered that the leaf is the most valuable and palatable portion of the various grasses and clovers, but contains a considerably higher percentage of protein than do the stems.

England's Coal Troubles Not New

Past Has Not Been Immune From Serious Situation

Today's troubles in the coal mining industry in England are serious enough, but it must not be thought that this is the first time.

After Henry III had granted a charter to the citizens of Newcastle, permitting them to dig coal, another king, Edward I, prohibited the use of the commodity for household purposes. This was because the ladies of the court complained that the sulphurous fumes were ruining their complexions. The citizens of London then took a hand. They protested against the use of coal by brewers and dyers, and the king nominated a commission to look into the matter. For a time offenders had to pay a heavy fine; for a second, their furnaces and kilns were broken up. Then the law suddenly got drastic, but as these penalties did not stop the practice of coal-burning, it was made a capital offence. One hundred shops were destroyed and fifteen hanged for burning coal in London. For a considerable time no one used coal but the poor, and the use of vertical chimney brought it into favor again.

Watercress Is Healthy

Centuries Ago It Was Popular Food For Greeks

Although it is so popular today, watercress was formerly so little esteemed that it gave rise to the expression "not worth a curse"—the latter word having been originally "cresse" or "cresson," as it was then spelt in Chaucer's day. This fact is all the more surprising, as before that time the health-giving quality was properly appreciated, and, indeed, flourished in an old Greek proverb: "Eat cress and learn more wit." Modern medicine almost repeats that saying, for it has a very good word for the piquant plants—whose botanical name, "nasturtium," signifies "nose-twister"—for its apt illusion to that piquancy which Pliny said would "put any nose into convulsions."

Cannot Solve Problem

Back Door in France, Front in Belgium Puzzles Tavern

A small house at Oost Cappel, on the French-Belgian border, is causing much concern to customs officials both in Paris and Brussels. This is because the front door is in one country and the back door in the other. The French are worried because duitable articles pass in the Belgian door and out of the customs free of the territory. The Belgians are similarly concerned when the route is reversed. The officials of both countries have been able to find a solution for this trouble.

Had Appetite For Metal

French Soldier Ate Nails, Pins and Coppers

Despondent while he served with the French Foreign Legion in Morocco, a soldier grew to a hankering for French money, ate nails, pins and other small metal pieces.

During an operation the patient's stomach had yielded the following items:

300 nails, 250 pins, 8 copper coins, one clasp knife, weighing a pound. The patient still is alive.

Finds Tree Buried Deep

A cedar tree trunk, found in New York 46 feet below the thin level of the Hudson River, by the dynamiting excavation for a skyscraper, is a relic of the glacial age. Experts have identified it as a species of red cedar that flourished in those schools a million years ago, but was never supposed to have lived in America until the present historical year.

Agricultural colleges, demonstrating and experimental farms have meant enormously increased production in Canada and have very considerably more than paid for their upkeep. Oral and other respects, maintained Principal J. B. Reynolds, of Guelph Agricultural College, in the course of an address at a luncheon, under the auspices of the Kiwanis Club of Ottawa, and members of the Canadian Society of Technical Agriculturists. Principal Reynolds urged there should well be a science of agricultural apologetics, and there was of theological apologetics, the idea being to bring home to the people at large the enormously beneficial results of technical training and of scientific agriculture.

Principal Reynolds maintained that the country must have a better town farming on scientific lines and with a higher standard of living, and that, generally, with a low standard of living. According to some agriculturists it was not difficult to account for a certain amount of exodus from the farm to the cities, but if the mass was working is reduced by scientific methods.

The principal was not enamored of so-called yuletide farming. He told of a friend who merged six one hundred acre farms into one six hundred acre farm, and when he saw him recently he had had to send several thousand dollars from his private business to make up a deficit on the operation of the big farm.

Free Homesteads Taken

A Great Deal of Free Land is Still Available in Canada

In the month of May this year 545 homesteads were taken up in Western Canada, an increase of 221 over the number of entries in May, 1927. Of the total of 545, seventy-two entries were made by Americans. In Saskatchewan there were 3,624 entries of which 123 were in the Prince Albert district and 189 in the Moose Jaw district. In Alberta the total was 1,340, 220 of which 149 were in the Edmonton district, 44 in Peace River and 39 in Prairie, and the remainder 973 in the Calgary and Lethbridge districts. The entries in Manitoba totalled 58, of which 54 were in the district of Dauphin and 16 in the Winnipeg district.

The Canadian Government still has fairly large areas of land for homestead entry in Manitoba, Saskatchewan and Alberta, and in the Railway Belt and Peace River Block in British Columbia. Free grants of 160 acres are made to British subjects or those who declare their intention of becoming British subjects. An entry fee of $10 is charged by the Canadian Government and certain conditions of residence and cultivation are required to be fulfilled within three years.

The homestead lands are now a considerable distance from the railways—60 to 80 miles—and consequently settlers with some capital may regard the purchase of good farm lands close to railways and markets at $15 to $20 per acre as worthy of payment as a better economic proposition.

Vitamines And Tin Cans

Some Canned Vegetables Apparently As Good As When Fresh

It is well known that cooking destroys much of the value of those curious health-giving chemical compounds classified as "vitamines." So it has been assumed that the process of canning did the same. But Dr. Eddy, of the Teachers' College, in New York, has proved that canned vegetables like spinach and tomatoes does not destroy the valuable vitamins C, which protects against scurvy. Dr. Eddy believes that it is oxidization rather than heat that affects the vitamines, and recommends that food in cans are exposed to oxygen much less than in open cooking.—Youth's Companion.

Co-operative Hatchery

Will Be Established in Calgary in the Near Future

A province-wide co-operative hatchery and brooding establishment will be established in Calgary in the near future, as soon as a building site has been selected. It is the object of the organization to turn out four lots for the first year. Each unit comprises a 15,000 egg capacity electric incubator and 600 coop of brooding houses. The farmers will send their eggs to the hatchery where they will be hatched and the chicks brooded until they are old enough to look after themselves, when they will be shipped back to the farm.

Building Activity

Building through Western Canada is particularly active this year. Permits issued this year in Winnipeg up to the end of June totalled approximately eight million dollars, as compared with $2,413,960 for the first six months of last year.

Not Too Exacting

Lunchen—Is a man who is making off with his overcoat—"I beg your pardon, sir, but in case we don't meet again, may I have a couple of cigars out of the pocket?"

"It's easy to be patient when you have nothing at stake.

Some Good Wood Preservatives

Creosote and Liquid Sulphur Is Used With Success

The natural resources intelligence service of the department of the interior at Ottawa, says:

Fences, posts, bridge and wharf timbers, shafts, timbers, planks, roof decking and general building timber will last for many extra years if properly treated with preservatives. This has been well demonstrated by the railway companies who now make it an almost universal practice of treating their ties, usually with a creosote preparation. Coal tar creosote is undoubtedly one of the best preservatives and at many points throughout Canada large plants have been established which are engaged in the treatment of railway ties, piles and timber for many other purposes.

The user of fence posts, shingles, sticks, planking for walks and other small dimension timbers may, however, if commercial facilities are not at hand, do his own creosoting. Professor R. W. Smith of the New York State College of Forestry, who has made an investigation into the subject, says that satisfactory equipment for the treatment of fence posts can be installed for dollars and consists only of an ordinary steel oil drum of 100 gallons capacity. Or the creosote may be applied with a brush or by swaying but immersion in the open tank is best.

It may be pointed out that railway ties are usually treated under high pressure so that the preserving material is actually forced into the wood structure, but in consequence a superficial treatment by dipping or with a brush is not sufficient. Mr. R. V. Lock, engineer of the Canada Creosoting Company, writing in the Engineering Journal, says:

"In some cases decay can occur only from outside agencies. If the surface of the wood is rendered creosote and water proof, decay from the interior timber will remain sound. The contention is doubtless correct and when the surface of a timber is preserved and effective protection completely maintained, the timber may last for a considerable period of time. Unfortunately wood and materials so treated are almost certain to have the protective coating broken, either by cracks, checks or checking. When this happens, the untreated interior is at once attacked by the fungi or decay and the effect of the protecting shell is completely destroyed.

"Creosote is not the only material now being put to this use. Zinc chloride, copper chloride or zinc and lead sulphide.

Increasing wood with sulphur is a rather recent development for which there appears to be considerable interest, notwithstanding the fact that many tests will have to be made to determine the exact proportions for the treatment. Practically all woods may be impregnated by the method in which sulphur by a steam open-tank treatment, and the quantity of sulphur absorbed varies within wide limits according to the timber structure and characteristics of the species.

The wood is generally immersed and held beneath the surface of the sulphur bath, which is maintained at a temperature of 140 to 150 deg. C. for five or 6 hours, at which temperature moisture has disappeared. It is then advisable to allow the temperature to drop to 120 or 115 deg. C. for other four or five hours, when the wood is removed. The extent of penetration is generally evidenced by the brightness of the wood in the sulphur bath and also by complete cessation of bubbling. A fifty per cent impregnation of white pine will expose only about one-fifth of its volume above the surface and will, of course, sink in water. The following table indicates the percentage of sulphur absorbed by certain woods:

Douglas fir	76 per cent
Cypress	40 per cent
White Spruce	44 per cent
White Pine	50 per cent
Red Oak	40 per cent

Manitoba's Financial Surplus

Another indication in the encouraging conditions in Western Canada is given in the financial report for the province of Manitoba recently handed by Premier John Bracken. The report shows as the end of the second year on April 30th last, the province had a surplus of $600,000 for the year, the largest annual surplus in the history of Manitoba. Premier Bracken is a practical farmer. Before becoming premier of Manitoba in 1922, he was president of the Manitoba Agricultural College.

New Fur Industry

New Brunswick's Rabbitry, Ltd., capitalized at $5,000, is the name of a company incorporated for a new fur farming industry in this province. The company has been formed to carry on the commercial breeding of Chinchilla rabbits at a farm on the Royal Road near Fredericton. A foundation stock of 60 Chinchilla rabbits have been imported from England.

A girl has it in her power to take any number of men happy for life—by declining to marry them.

When you send good money after bad it never returns to you.

Dairying In the West

Most Remarkable Growth of the Industry in Manitoba

In an address given recently before the Winnipeg Kiwanis Club, L. A. Gibson, dairy commissioner for the Manitoba Government, stated that in his opinion the grain belt of the province of Western Canada would in time become the premier dairy producing centre of Canada. "The western provinces of Canada are passing through the same experiences as the middle western states did forty years ago," he said. "The United States, Wisconsin, Minnesota and Iowa had occupied relatively the same position as did Manitoba, Saskatchewan and Alberta in Canada. They were then the great grain producing regions of the nation. Today, they lead in output of dairy products."

Something of the growth of the industry in Manitoba may be gathered from Mr. Gibson when he said that in 1912 between 50 and 60 carloads of cream and butter had been shipped into Manitoba from Ontario and Quebec, but in 1913, the imports had been 25 carloads and in 1914, 30 carloads.

In 1915, the industry had grown enough to better to meet market requirements and also shipped out of the province 60 carloads. This had been increasing each year until in 1925 the province had exported 225 carloads, valued at $1,350,000.

The British market was proving to be the best for surplus butter of the province. Shipments of cheese, of several million pounds each year, and Alberta was taking care of this.

Damage Caused By Smoke

Acids Harmful to Vegetation Are Carried Long Distances

Smoke alone is responsible for an immense amount of damage to living vegetation, says Dr. Haselhoff, but mist in a dense smoke-fog, it plays havoc with plant life.

Although I am not a Canadian by birth or heritage, I am in 18 carat Canadian by affection," he said.

"When I go home I am going to say: 'I have seen a nation about whose future I am full of optimism.'

"Here we have a country where a good God has given you a most wonderful soil, a most wonderful fertility, and then add to it 90 per cent. of inexpectis come. Out of that soil your boys become men, your girls women, and both become Canadians.

"You have a constitution derived from what is best in the constitution of the Old Country and what is best in the constitution of your next door neighbor."

Manitoba's Cream Production

Manitoba's cream output for the month of April gives indication of a substantial addition to the record to be established for the year by reason of the increased over the corresponding month of last year by nearly 540,000 pounds, an addition the receipts of high-grade cream are 14 per cent. over the same month of 1925. Cream graders of the province have been increased from 42 to 50.

As soon as the poor Barber begins to scrape acquaintances he eats them.

Defects That Shorten Life

Almost two million defects that could shorten life and impair working capacity were found in nearly one-half million people examined by the Life Extension Institute, according to Dr. Eugene L. Fisk, medical director of the Institute.

More than 80 per cent. of these defects were preventable or curable, Dr. Fisk said.

"The business of living should be run like any other business," said Dr. Fisk, "not by watching daily incursions or worrying about them, but by periodically checking up the trend of the business and then quantity may jog to correct anything that is wrong.

"It is folly to watch oneself for constantly—to see oneself as in a perpetual moving picture romance.

"Especially as one grows older it is wise to abolish birthday celebrations. Instead of one day according to one's condition and capacity instead of by the birthday record.

"The only gain in public health will be in the working and playing period of life. The playing period should be long and the working period—up to 60, 70 or 100 it is to be reached.

"The idea that play ceases in early life is just as wrong as the idea that the world was made with the sole object of earning enough to stop work and play."

Canada And Its Constitution

Governor-General Speaks of His Affection For the Land of the Maple Leaf

What is best in the constitution of the United States and best in the constitution of Great Britain make up the constitution of Canada,- said Lord Byng, Governor-General of Canada, recently in a farewell address given before the Canadian Club at Victoria, British Columbia. Lord Byng's term as Governor-General of Canada ends next September.

"Although I am not a Canadian by birth or heritage, I am in 18 carat Canadian by affection," he said.

"When I go home I am going to say: 'I have seen a nation about whose future I am full of optimism.'

"Here we have a country where a good God has given you a most wonderful soil, a most wonderful fertility, and then add to it 90 per cent. of inexpectis come. Out of that soil your boys become men, your girls women, and both become Canadians.

"You have a constitution derived from what is best in the constitution of the Old Country and what is best in the constitution of your next door neighbor."

Organ Is Still Popular

Has Undergone Marvelous Transformation In Last Few Years

"Pianos and Organs for Sale," is still a standing head in classified advertisements in the daily and weekly papers. But where are the organs? A recent issue of the Post-Dispatch, which has been devoted scores of pianos, band and player, but not a single organ. Why, in recent times, there were in almost every home the most popular parlor organ displayed in the music stores?

The fact is a popular instrument is still very much with us. But it has undergone a marvellous transformation. Nothing at least from our observation, where the piano, piano-player, phonograph and radio have taken its place, it has reappeared in our churches, in our assembly rooms, in a glorified form, with many voices, played by electricity, and with possibilities undreamed of by builders of organs for churches or homes.

Is the day of the home organ gone forever? Not by any means, at least in the cities. At its best, it was a fine musical instrument capable of entertainment and, and it had an inspiring quality, especially with sacred music, that is not to be found in the average piano.—St. Louis Post-Dispatch.

Automobile Tourist Trade

Records of automobiles entering the border into British Columbia for the first four months of this year indicate that the tourist trade is increasing, the number of tourists visiting this province. Figures for the four months show that 16,677 cars entered as compared with 16,275 for the corresponding period in 1925. The number of passengers was 54,610 against 56,861 last year.

Expect Heavy Traffic

In spite of the fact that there are especially large conventions this year at the coast, the volume of tourist and transcontinental traffic through the British Columbia and Western Canada this summer will be to great, it is not to be overlooked, in the opinion of C. E. E. Lusher, general passenger traffic manager of the Canadian Pacific Railway.

Equipped with a very sensitive telephone, a scientist has been able to detect the approach of metals by the sounds they make under earth.

Once the aviators have reached the North Pole the next step will be Mars.

Canadian Eskimos Nearing Extinction

White Man's Conditions

The Eskimos of the Canadian Arctic are doomed in early extermination unless prompt methods are adopted by the government for their protection in the opinion of Capt. Henry Toke Munn, retired Arctic trader, with 20 years' experience of the far north.

"The export of caribou skins from the Northwest Territories needs immediate action on the part of the Canadian Government," Captain Munn declared. It should be definitely stopped and the plan that is often used being transferred from sections where they are plentiful to less fortunate ones may be discussed as a policy of robbing Peter to pay Paul.

Recent careful estimates of the Eskimo population of the Canadian Arctic set the total at 4,500 souls, with a steady decrease. Against this the Eskimo gain in public health will be in the working and playing period of life. The playing period should be long and the working period—up to 60, 70 or 100 it is to be reached.

"The idea that play ceases in early life is just as wrong as the idea that the world was made with the sole object of earning enough to stop work and play."

Europe's Happiest Jail

Director of Rumanian Prison Allows Inmates Unusual Liberty

The most agreeable jail in Europe has just been found in Galatz, Rumania. In fact, the regime at the Galatz jail has been serious happy one for the prisoners that the minister of the interior has ordered the transfer into all the jails in the country to see if similar conditions exist as other places.

Rumora have it that Rumanian penal institutions are penal in name only, the inmates enjoying a measure of liberty which, in other lands, would surprise the jails themselves to vacations at distant points. The Galatz jail, it is reported, may be taken as indicative.

Per "a reasonable sum" to the director of the prison, a room comfortable haven of rest have been able to do almost as they pleased. Those accused of commercial crimes, whose enterprise have had no difficulty in leaving the prison whenever urgent business called them elsewhere. Those serving his eyes to absences of three or four days. A prisoner tiring of the ennui and atmosphere of his cell can, for seven cheerful coins in the eyes of the Galatz and there live in peace and quiet, visiting the prison for an hour each day to answer the "roll call" and to put in an official appearance.

The most amazing instance, however, of the jailer's leniency occurred in the case of a business man condemned to five years' imprisonment. He was ready to go to the prison in Rumanian girl and finally persuaded the jailer to allow him to marry before the church of Galatz. As a final act of kindness he received a "leave of absence" from the jail for three weeks, during which he spent on a honeymoon.

Many other prisoners figured only nominally on the books of the institution, having left the country quietly.

Shipping Buffalo North

First Quota of Animal Shipment From Wainwright Herd Is On the Way

The first quota of the annual buffalo shipment of buffalo to the north, consisting of 258 three-year-olds, left Wainwright recently in specially equipped steel-framed stock cars. The nine cars in which these were lodged will travel via Canadian National Railways, from which point they will be transported by scow to a point within 30 miles of Fort Fitzgerald, where they will be turned loose to roam with native herds in that district, according to the terms of the government's migration from the prairie. Somewhat less scows were entered during the flooding and loading but no accidents occurred.

Sweet City Flapper—"Where's Daddy?"

Her Country Aunt—"He's out fixing the pig pen, dearie."

Sweet City Flapper—"Gracious! I didn't even know that pigs could write!"

A scientist says the first alcohol was distilled came from Arabia, which may explain those sheiks.

Who Is Your Double?

Everyone Has At Least One Double Somewhere in the World

A Dutch scientist connected with Groningen University is authority for the statement that everyone has at least one double somewhere in the world and that "doubles" are always of the same sex though they may be distant ones. The first part of this assertion is by no means new, and the second part is not improbable. Like all such records numberless cases of "doubles," and the writers of fiction have built up innumerable thrilling stories in which this theory gives relief interest to their plots. Facial resemblances to the obvious not to be taken for granted, and these minor similarities constantly repeat themselves in members of the same family. Many of the great names of Europe afford ample proof that physical characteristics are inherited. A glance through the pages which contain the portraits of the scions of historic British houses shows that often the resemblance between a member of the line of one century and a descendant in a succeeding century is so great that they might be taken for the same person but for the difference in costume.

Perhaps among no people so much as in the British Isles do types of race marked, and no doubt it is to this fact that we have so many people in Canada who look like "Johnny Bull" as they are in the Motherland or prominent figures in the Dominion. Every day we were struck by the resemblance we remind one of Lloyd George, of Rudyard Macdonald, of the Prince of Wales or the Church of Canada. As a final act of kindness he received a "leave of absence" from the jail for three weeks, during which he spent on a honeymoon.

Many other prisoners figured only nominally on the books of the institution, having left the country quietly.

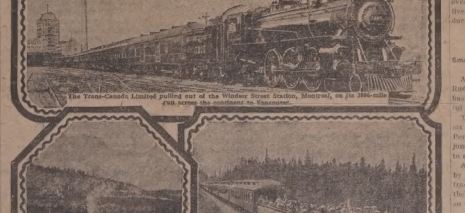
Few Contribute To World's Progress

People Could Do Much More Educative Work

It is a fact often commented on among economists that out of the millions of men and women who have lived and died since time was recorded relatively a few thousands of brains gave to the world that which brought it above the level of savagery. It is agents of civilization hundreds of millions of people are negligible according to standards who are living the prospect what the future of the universe will be.

The Golden Highway

The first automobile highway across the Great Divide from Lake Louise to Field, B.C., running parallel to the Canadian Pacific Railway, was formally opened recently. A unique feature of the new road is that in the sixteen miles from Lake Louise to Field it drops fifteen hundred feet after crossing the Great Divide and with no greater grade than 8 per cent. The new road will be known as "The Golden Highway."



The Trans-Canada Limited pulling out of the Windsor Street Station, Montreal, on its 366-mile run across the continent to Vancouver.

Passing through the Rockies.

Open observation car that runs through Canadian Rockies and which is so delightful a feature of the Trans-Canada Limited.

C.P.R. Flyer Links East and West

Every night from Montreal and Toronto and every night from Vancouver the Trans-Canada Limited, C.P.R. all steel flyer that traverses the continent in under 96 hours, starts out on its record-making trip. Unique on the North American continent, the Trans-Canada is the longest distance all-Canadian all-steel train service between the Atlantic and Pacific with no change of cars or locomotive. Painted a handsome Tuscan yellow and specially designed for quick C.P.R. trains, known as "Tuscan Red," which is successful of a very high degree of public favor with the distinctive brown upholstering which is name it picked out in Canadian-built leather on a yellow body. Equipped with the very latest in modern conveniences, the Trans-Canada Limited has an entrance in long into the realm of luxury travel, acquired all over the British Empire.

On the observation car that runs through Canadian Rockies and which is so delightful a feature of the Trans-Canada Limited, the traveler can sit in comfort and watch the mighty panorama of the Canadian Rockies unfold and recede as the train speeds through the mountains. Meals are served in the dining car, the Canadian Rockies and finally Vancouver.

The Trans-Canada Limited is the only train in the world that has a complete bathroom for every two persons. Each stateroom has its own bathroom, with hot and cold water, shower and tub. Each stateroom has its own bathroom, with hot and cold water, shower and tub. Each stateroom has its own bathroom, with hot and cold water, shower and tub.

The Trans-Canada Limited is the only train in the world that has a complete bathroom for every two persons

WORLD HAPPENINGS BRIEFLY TOLD

The military committee of the preparatory disarmament commission adjourned until August.

Thirty-one deaths and damage estimated at $3,000,000 are attributed to the recent storms and floods in Germany.

Dr. Otto Ludwig, Weldfeld, former German ambassador to the United States and director-general of the Krupp Works, died July 5.

The Swedish Government, growing tired of having so many drownings every year, has started a drastic campaign to force everyone to learn to swim.

Joseph Courtenay, 77, veteran of the Riel Rebellion in 1885, at one time Indian agent at The Pas, Man., and also connected with the Indian department at Prince Albert, is dead at New Westminster. He was a native of Ireland.

Seven marshals of Italy, in addition to the King and Premier Mussolini, have promised to be present at the elaborate ceremony when the foundation of the Victory Monument in Italy at Bolzano, Italy.

Advices from Lemu say enormous damage has been caused in a large section of Upper Austria by floods, caused by cloudbursts. The dispatches say there has been loss of life but no figures are given.

The administration of the Hohenzollern family has notified the Prussian state of the willingness of his clients to resume negotiations concerning the disposition of the property in the state owned by the former royal family.

The London Daily News' political correspondent says that Lord Birkenhead is refusing dissolution to former Premier W. L. Mackenzie King will be brought to the discussion by all of the Dominion premiers at the imperial conference in October.

The United States submarine S-51, rammed and sunk off Block Island by the steamer City of Rome last September, was raised on the Rhode Island navy yard. The submarine, which had 33 aboard, when it went down, was raised after a series of powerful attempts. It is believed the submarine contains the bodies of 25 sailors.

Equal Political Rights

British Women Under 30 to Fight For Franchise

British women are about to open a strenuous fight to do away with present suffrage laws which exclude them from the right to vote until they are 30 years old.

Many prominent men have agreed to join a great mass meeting staged by forty women's societies in the interests of equal political rights. Among them are Lord Balfour, Lord Cecil and Pethwick Lawrence, M.P.

George Bernard Shaw, the noted playwright, however, has declined to participate.

Under the present suffrage laws in England 5,000,000 women above the age of 21, but below the age of 30, are unable to vote while qualified men above the age of 21 have the ballot. All the old-time suffrage leaders and thousands of other prominent women resent this discrimination.

Fail To Scale High Peak

Mountain Climbers Experience Hardships in British Columbia

Repulsed by British Columbia's 13,660-foot Mt. Robson mountain, a 32-hour struggle for victory across huge glaciers and high snowfields by the hitherto undefeated band of Coast range, an Alpine Club expedition came close to facing actual starvation as the homeward trip, prolonged to members of the party who returned to Vancouver. They spent five weeks in exploring themselves of the existence of such a great peak within 150 miles of Vancouver and in sight of citizens on the head of Howe Sound. The climbers reached an altitude of 10,000 feet on June 24.

The Star Spangled Banner

Counters Effort to Censor Famous Battle Hymn of Democracy It Be Made National Anthem

A demand that the United States congress officially declare the "Star Spangled Banner" the national anthem was made in the house at Washington by representative Linthicum of Maryland, Democrat, as a result of the attempt in New York to censor the words of the country's patriotic hymn.

The controversy hinges on the question raised by Mrs. Charles R. Sears, Berkeley, New York, who objected to the song from a recent Independence celebration on the ground that the words didn't offend some English people who were present.

Divorces Are Delayed

Dissolution of parliament left at his happier couples without a decree. Thirteen of the twelve bills had finally passed both houses of parliament and were awaiting royal assent. Thirty divorce bills had passed the senate and were still in committee stage of the house.

It is rather a curious fact that the fifty popular beverages, tea, coffee and cocoa, all were introduced into [illegible] within the last few years of each [illegible] ...ceeding to [illegible] ...are made by [illegible] ...ages.

To Make Film At Jasper

Screen Feature Portrayed in Magnificent Settings of Canadian Rockies

Jasper, the world's largest national park is to provide the setting for one of the great moving picture epics of the year. "The Country Beyond," an adaptation of the story of that name by James Oliver Curwood, which is being produced by the Fox Film Corporation under the personal direction of Mr. Irving Cummings. The cast, which is a notable one, includes such stars as Olive Borden, J. Farrell MacDonald, Ralph Graves, Fred Kohler and Lawford Davidson, as well as a number of others of outstanding ability.

Two sections of the park have been chosen by Mr. Cummings as the setting for his play. Recently the company started work beside the lake waters of the Lake of Forgiveness, which lies in the shadow of Mount Edith Cavell. There and about Jasper Park Lodge, on the shores of Lac Beauvert, the preliminary work is being carried on. Later the entire company will move by pony trail to Maligne Lake, where the remainder of the picture will be filmed. The work will occupy almost three weeks, and it calls for an expenditure of almost a quarter of a million dollars.

Never before has Hollywood come so far north to film a picture. This is the first time in the history of the Canadian Rockies that a complete screen feature has been produced north of the international boundary.

Synthetic Wood From Sugar Cane

Inventors Have Found Material That Makes Ideal Substitute For Lumber

Potential houses, railway cars and automobiles to be in every waving field of sugar cane.

As the sweetening power goes out, the industry is spreading across the Mississippi Valley from New Orleans, the heart of the sugar country. From the mid-Louisiana delta wood pulp that looks more like a lump of sugar than a lump which connects certain complaints of cattle with humans with phenomena of the sun.

Abbe said that it was not surprising that these suspects increased the bother of rheumatism and neuralgia of humans.

"Electricity acts directly on our nerve cells," he concluded. "Our own bodies, like those of lower animals, are subject to additional nervous excitement such as that caused when electrons thrown off by the sun strike our atmosphere and electrify the air we breathe, against the time when [illegible] ...ne and affects in the glasses about [illegible] ...ally they tried bagasse, the name given to sugar cane when the sugar has been extracted.

Canadian National Earnings

706.71 Per Cent. Increase In Canadian National Railways Net Earnings For Month

Earnings statement issued recently by the Canadian National Railways system for the month of $2,826,435.56, a 706.71 per cent. in net earnings for May as compared with the same month of 1926, with an increase of $2,475,460.91, or 209.38 per cent. for the five months period since the first of the year as compared with the same period in 1926.

Gross earnings for the month of May, 1926, were $12,183,894 as against $18,246,330, and for 1925, an increase of $3,937,566, or 21.58 per cent. Working expenses were $18,956,336.67 in May, 1926, against $17,545,798.23 in May, 1925, an increase of $1,111,140.44 or 6.24 per cent. Net earnings for the month of May, 1926, $299,939.77 as against $299,939.77 for May of last year, an increase of $2,826,435.56, or 706.71 per cent. Net earnings for five months, 1926, was $5.46 per cent. as compared with 92.81 per cent. in the same month of last year.

Prince Has Worked Hard

Tireless Energy Has Won Admiration From All Classes

There are few young men in the world who work so much or so effectively and so much hard work into their early manhood. He has tackled the problem of learning the duties attaching to his high office, and of preparing himself for still higher duties, with an enthusiasm, a thoroughness, a keenness, and a tireless resolution that have won for him the admiration even of those who are opposed on principle to royalty in any form.—Montreal Star.

Canada Reverts to Gold Standard

Canada has now reverted to the gold standard, and yesterday, the first day of paper currency issued by the Canadian Government or by any chartered bank in Canada, bore exchange parity with gold—if he wants it. Canada is nominally a gold standard country, but during the war found it necessary, for financial purposes, to suspend payment in gold, and the paper money issued by the banks was made legal tender. Penny postage is now in effect.

Our respect for old age depends greatly on whether it is applied to men and women or to boarding house poultry.

The Tallest Building

Detroit to Have Store and Office Building 873 Feet High

The city of Detroit has for long had the distinction of being the largest automobile manufacturing centre in the world. It is soon to have another distinction, that of possessing the world's highest building. The famous Woolworth Building in New York, which has heretofore enjoyed the height record for buildings, is in to be eclipsed, and, very materially.

Work has been started on the new Book Tower, which is to contain 81 storeys and is to be no less than 873 feet high. It will have 22 more storeys than the Woolworth Building, and will be nearly 100 feet higher. This mammoth building will have a frontage of 225 feet on State Street, 220 feet on Washington Boulevard, and 180 feet on Park Place. The main portion of the building will be 42 storeys high. Each floor of this portion will have 30,000 square feet of space. Above this the tower, 229 by 125 feet, will rise 39 storeys. On its top there will be the most powerful searchlight in the world. It will be visible for 75 miles.

Stores and shops are to occupy the first floor. The second, third and fourth floors will be occupied by banks, trust companies, and similar institutions. The remaining floors will be for general offices.

The only structure in the world which exceeds the proposed Book Tower in height is the Eiffel Tower in Paris, 999 feet high, but it is not a building. It is a steel frame.

Blames Sun For Rheumatism

French Priest Astronomer Says Sunspots Cause This Trouble

If your old rheumatism interferes with your golf or a bothersome tooth starts aching again, blame it on the sunspots. For we must now look forward to a period of rheumatic and neuralgic afflictions.

The Abbe Moreaux, famous priest-astronomer of the Bourges Observatory in the hills and one of the most successful prognosticators of the weather of seasons in France, is the chief author of a theory which connects certain complaints of earthly humans with phenomena of the sun.

Abbe said that it was not surprising that these suspects increased the bother of rheumatism and neuralgia of humans.

"Electricity acts directly on our nerve cells," he concluded. "Our own bodies, like those of lower animals, are subject to additional nervous excitement such as that caused when electrons thrown off by the sun strike our atmosphere and electrify the air we breathe, against the time when [illegible] ...ne and affects in the glasses about [illegible] ...ally they tried bagasse, the name given to sugar cane when the sugar has been extracted.

Queer Design For Plane

New Tailless Aeroplane is Inspired by Prehistoric Lizard

A tailless aeroplane, whose inventor went for inspiration to the prehistoric lizards of the Pteranodon type, and to a new vertically-rising helicopter, invented by the Spaniard, De la Cierva, will be the principal features of interest at the annual display of the royal air forces at Hendon, in the suburbs of London.

The tailless plane is the invention of Captain G. T. R. Hill. It is a monoplane and its single pair of wings, instead of the leathery membrane of the pterodactyl, are attached to a short body that carries pilot, passengers and freight.

Objectionable Motor Signs

Move Made in New Jersey to Revoke Licenses of Motorists With Offensive Placards

Commissioner Dill, of the New Jersey motor vehicle department, said he will attempt to revoke licenses of motorists who display offensive signs beneath registration plates.

Commissioner Dill said he believed this idea was the only possible one to abate the evil. He added: It was wrong to offend the public with placards which profanity even was rendered this year as too damn close."

Okanagan Lake Service

New C.N.R. Steamship Service On Okanagan Lake

Announcement is made of the opening by the Canadian National Railways of a steamship service between Kelowna and Penticton on the Okanagan Lake. A new steamship, the Penticton, will make two trips each way daily, except Sunday, starting July 16. This new passenger service, which was put into operation with the completion some months ago of the Canadian National line from Kelowna to Kamloops and Kelowna and gives a complete service from Penticton connecting at the Canadian National line east and west from Kamloops.

Ripens Bananas Rapidly

A method of ripening a carload of green bananas at a cost of forty cents has been discovered by University of Minnesota scientists. Ethylene gas does the work.

It's impossible to suppress the man who imagines that he can tell a funny story.

The twenty-six letters of the alphabet can be transposed 620,401,448,725,326,676,349,000 times.

1245

Distinctive In Line and Fabric

The dainty printed frock, the epitome of the new season, finds expression in the model pictured here. Details that go to make the chic and successful frock for women of larger figure are combined in the softly modeled lines of the bodice, the deep V front opening, and scarf-like cuffs. Also, in addrevers and a set-under button-trimmed section of the same contrasting material as the collar and tab cuffs which trim the long, tight, set-in sleeves. No. 1245 is in sizes 36, 38, 40, 42 and 44 inches bust. Size 38 requires 4¼ yards 39-inch figured material; ⅝ yard plain contrasting. Price 20 cents.

Every woman's desire is to achieve that smart different appearance which draws favorable comment from the observing public. The designs illustrated in our new Fashion Book are originated in the heart of the style centres and will help you to acquire that much desired air of individuality. Price of the book 10 cents, the copy.

One Habit Japan Will Not Tolerate

Prefect of Police Recently Issued Statement Against Kissing

Kissing is decidedly under the ban in Japan, where the art of osculation is described as a "foreign fad and the modest habit." Recently the Prefect of Police in Tokio issued the following statement:

"Kissing is a custom entirely foreign to Japan, and it is undesirable that it should be introduced into this country. It is unclean, immodest, indecorous, ungraceful, and likely to cause the spread of disease.

"This 'immodest habit' is so thoroughly repugnant to the Japanese nature that even children are given only a short body that carries pilot, passengers and freight.

Objectionable Motor Signs

Move Made in New Jersey to Revoke Licenses of Motorists With Offensive Placards

Commissioner Dill, of the New Jersey motor vehicle department, said he will attempt to revoke licenses of motorists who display offensive signs beneath registration plates.

Commissioner Dill said he believed this idea was the only possible one to abate the evil. He added: It was wrong to offend the public with placards which profanity even was rendered this year as too damn close."

Ripens Bananas Rapidly

A method of ripening a carload of green bananas at a cost of forty cents has been discovered by University of Minnesota scientists. Ethylene gas does the work.

How Russia Conveys Money To Strikers

Sent to Communists By State Mails Says Whitehall Gazette

The methods by which Russian money for the striking British miners was sent into England during the general strike, and is still being sent, is described in the Whitehall Gazette as follows:

"A sum of money, in one pounds and five pound notes, is placed in a sealed envelope in Moscow. This envelope is placed in a diplomatic valise, and the whole is handed to one of the secretaries of the Soviet Legation at London. He, in his turn, passes the envelope, unopened to a woman—a member of the (British) Communist party. This woman meets a male member of the Communist party in a room in St. Bride Street (London). The man leaves St. Bride Street on a motorcycle for an unknown destination, believed, however, to be the head office of the Communist party."

Large payments, it is believed, are made in the form of cheques to members of the "Underground" section of the Communist party, who are known only to two or three of the party chiefs. Most of these men carry on some sort of business, so that if the scandal arises they can prove that the cheques received by them from Riga, Berlin, Paris, Vienna, are legitimate business payments. A considerable part of the offices of the Miners' Federation has been identified as an official of the Soviet Legation in London.

New British Industry Growing

Firms Making Artificial Silk See Infinite Possibilities in New Material

The rise of the artificial silk industry is marvellous. Scarcely more than two or three years old, already one British firm alone supplies one-third of the world's demand for artificial silk. The shares of this company are valued at $400,000,000. A plant in Coventry delivers seven miles of artificial silk thread a second—made of pinewood pulp. Thousands of workmen in Bradford are employed to dye this product. The town of Leicester counts one fifth of the total of artificial silk stockings a year. The Lancashire cotton weavers are adapting their mills to the production of the new material, at once utilitudian and beautiful, but become the staple fabric for shawls, stockings, dresses, and underwear—and its possibilities are only something short of infinite.

It is a beautiful fabric and a heartening one. It shows there is life yet in the old dog John Bull, notwithstanding the croakers. And it shows, incidentally, that the controversy about the proper name for artificial silk is a storm in a teacup. For it is certain that this silk by any other name is destined to be a household word in all the world.

Criminals Of the East

Accomplished Western Crook Cannot Compete With Those of Asiatic Countries

The criminals of the east are far more subtle, cunning, patient, painstaking and artistic than the most accomplished crook to be found in the west. Therefore it naturally follows that the best catching him must be much more difficult.

As is generally known, the head police officials in Bombay, India, although they have the assistance of native experts. There is a native detective in Bombay—a Hindu of course—who no crime investigation could make our best Sherlock Holmes look pretty silly.

He is a genius at disguise and knows every twist and turn of the Asiatic mind. There is scarcely a crook or crime in India about which he is not familiar. The most exciting crime story to be found in the records of Bombay police is the story of the fantastic compared with many of the astounding exploits of this Bombay detective.

Then there is the native "cracker," the rifle of whom is not to be found in the west. He will track a "mark" a man, over hundreds of miles of country, the chase sometimes lasting for weeks. His "game" once found will be quite invisible to other eyes.

Largest Electric Locomotive

Driven By Six Motors Has Had Trial Trip At Berne

The largest electric locomotive in the world, constructed by Geneve engineers, was successfully tested in its first trial trip at Berne. The monster weighs 283,350 pounds, is more than twenty metres long and is driven by six motors, with a total force of 4,500 horsepower. The locomotive, which can be driven by one man, can easily attain a speed of more than 100 miles an hour under normal conditions. It will be shortly employed upon the international Electric Line at Berne and Lausanne, where the heavy express service will be accelerated.

Whale Killed By Steamer

The Berengia, one of the largest of the Atlantic steamers, was shaken from stem to stern and passengers aroused by strong vibrations when they felt struck a whale off the English coast recently. The whale, one of a school of six, was instantly killed.

Not a Blow

"Gracious, but you were gone a long time!" expostulated Bill. "Have a blowout?"

"No!" replied Ada in disgust. "He never spent a cent!"

SUNDAY SCHOOL LESSON

JULY 18

THE CALL OF MOSES

Golden Text: Certainly I will be with thee. Exodus 3:12.

Lesson: Exodus 2:11-4:18.

Devotional Reading: Psalm 90:12-17.

Reference and Comments

Moses Called to be the Agent of God in a Great Undertaking. Exodus 3:10.—"The biography of great men is not written for public review, and many of the incidents which are private, and describe the experiences which are spiritual results. Thus it was with Moses. He must be with him in the wilderness in order that we may understand the secret of the power of his soul." The summons to be the deliverer of his people, delivered them from oppression by the Egyptians [illegible] ...brew slaves [illegible] ...Horeb.

Only in the sacredness of inward silence does the soul truly meet the secret, hiding God. The strength or resolve, which afterwards shapes life, and makes itself known in action, is the fruit of those sacred, solitary moments. There is a divine depth in silence. We "feel God alone" (Ter. Ph. Ad. Heauton).

There before a bush that burned and yet was not consumed, Moses heard God speaking to him. At the account of the temptation of Christ in the wilderness we have come upon himself, and in his pictorial way of portraying his inner experience, so the account of the call that came to Moses in the wilderness must have been told by Moses himself. It must have been given by him in a pictorial way. The burning bush was a representation as outward of something that was inward—the divine enthusiasm for a great cause. Be that as it may, it is scarcely true that Moses had the power to see the divine origin of the glowing beauty of the bush. He had to be one God in the things of everyday life.

Means Of Identification

Newspaper Reporters in Paris Occasionally Wear High Hats

Parisian newspaper reporters may wear high hats when covering assignments in which identification is difficult. Not as a matter of protection, but of identification.

Instances of reporters being injured in street frays have grown quite common, not due to the police growing more ferocious, but because they are unable to distinguish between rioters and reporters. French newspaper editors are beginning to see the scene of manifestations rather than remaining behind police lines and sending their reporters to watch them—as once was the custom.

B.C. Fisheries

The fisheries production of British Columbia in 1925 had a total value of $22,450,253, compared with $21,257,567 in 1924, according to a report of the bureau of statistics. The value of last year's production exceeds that of any previous year's output, excepting that of each of the years 1918 and 1919. Salmon fishery is of chief importance, the value of its products in 1925 amounting to $14,864,000 or 66 per cent. of the total. Halibut and herring fisheries were next in importance.

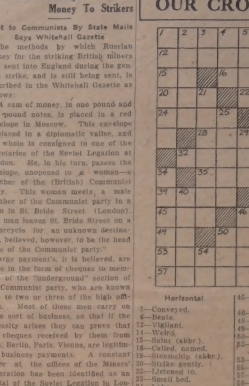
Edmonton's Population

Edmonton's population is still increasing rapidly, according to census of 1,037 during the past year, which makes the city's present total 66,415, according to the official figures of the recent civic census.

Heaviest Man Dead

The heaviest man in the world, known as Tom Tom and for many years a side show attraction, recently died in a Los Angeles hospital. His future. He weighed 945 lbs. and always had to travel on a baggage car.

OUR CROSSWORD PUZZLE



Horizontal

1—Conveyed.
6—Beats.
12—Valiant.
14—Waltz.
15—Saint (abbr.).
16—Called; named.
17—Steamship (abbr.).
20—Sister of Cain.
22—Listened to.
24—Small bed.
25—Lake.
26—Fuel.
27—Cornmeal bread.
28—Applaud.
29—Flowerless plant.

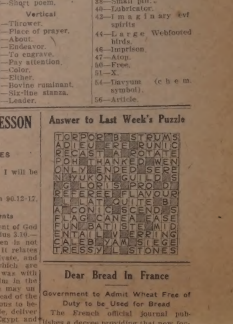
Answer to Last Week's Puzzle



Dear Bread In France

Government to Admit Wheat Free of Duty to be Used for Bread

The French official journal published decree permitting that one foreign wheat to be used for bread-making is to be admitted to France free of duty, but, decree stipulates such wheat must be imported with the distinct understanding that it is to be used solely for bread.

The decree says that within five days from publication the millers must report to the prefect of the department in which they are located full details of the actual stocks of wheat on hand.

The decree goes on to say that the prices of wheat, on rumors that the millers are hoarding with a view to bolstering up the prices, will create much dissatisfaction throughout the country.

Given Safe Transport

Silver Coins From Royal Mint Delivered During the London Strike

Loaded with coins of silver, weighing 4½ tons, a motor lorry journeyed safely during the strike from the Royal Mint in London to Greenock, and saw the specie safely stowed on board H.M.S. Warspite and a number of other eastern points. On the lorry were three armed policemen. two special constables and the driver. The journey of about 400 miles was made in 48 hours, and very few stops were made, the drivers taking turns at the wheel. Except when stopping for petrol, they were on the lorry the whole time, and even ate on the lorry during the journey. The silver was to start packing cases, covered by a tarpaulin, and there was nothing to indicate the nature of the freight.

Smugglers Reaping Fortunes

Profits Are Enormous on Silk Stockings Taken into Rumania

Bootleggers in silk stockings are reaping fortunes in Rumania. There is a prohibitive duty on articles "de luxe" generally. But the Rumanian people, who in the past dressed in the Balkans, demands these article at any cost.

Smugglers, many of them women, smuggle and sell thousands of pairs of Parisian silk hosiery. Their profits are enormous. Last year Rumania imported about 2,000,000 pairs of worth. Silk stockings of the best quality cost in Rumania $16 a pair. A suit of silk lingerie costs $25 to $75.

Radio Assists Growth of Plants

That vegetables can be grown by wireless energy is the claim of an amateur gardener of West Bridgeford, England. He says he noticed that tomato and cucumber plants were drawing energy from his aerial and making wonderful headway. Plants 15 feet away were said by him to have yielded 25 cucumbers, some two feet long.

No man ever travelled over the road to fame on a pass.

A Superior Milk Cap

A milk cap should do more than fit the mouth of a bottle. It should also be easily removable—impervious to water—neatly printed.

All these features are combined in the Appleford milk cap. Made of quality board it hugs the lip of the bottle, yet is so pliable it is quickly removed. The pores are filled with wax to protect the milk from moisture or contamination. The printing is clear-cut and distinctive.

(Continued)

CHAPTER IX.

Joanna Answers Questions

Brandon watched the girl who sat opposite him, across the little table. The wraith-like smile—the smile that Antinéa, the fatalist, hovered coyly at his lips, and in his eyes. The gigolet he watched breather quickly, silently, while she surveyed the bright scene around her. Her every movement, into far corners of the pink and gold hung room, in among the dancers and the other few tables that shared their own. Suddenly her glance met Brandon's. She nodded at him, as if she had surveyed his reflections, when ever they were.

"It was good of you to come," Brandon murmured, frequently. It was not be such a simple matter to win a tete-a-tete from you."

"After what you hope, you will tell me what you know and I don't know, of what 'proximity' is to be for me," Joanna smiled. "I'm not sure which was never far absent, showing again in her face.

"We shall have to make a new beginning," he said. "That you will accept from me completely that I am only a spectator to your extraordinary efforts to maintain your individuality as you give me favor. What are you

"Please" Joanna interrupted: "Not new—not just yet. Of course a man always has a list of questions to put to any girl he is getting acquainted with, at least that's what I've found, and your list is longer than most, I suppose. But always, I've found, answers—learned them by heart, you know, but they won't fit now. So I shall have to think when you've asked. And I don't want to think—just yet. About myself, I mean."

She fell, to looking about the room, again, quite interesting restlessly, but shining with the inner setting of the moment.

Brandon had come to her, as they had agreed, in the wake of the flowers she had found, in their disused boxes, awaiting her when she returned with Georgie from their gay round of shopping after her visit to Grandon's office. One of the boxes now clung to the water. Brandon, as he eyed her, compared its delicate perfection with the more flamboyant richness of the orchids—a loveliness still marred, he saw, by the too elaborately petalled perfection of the latter. Joanna had compared little body was quiet, but her soul was dancing; the gleams in her eyes showed it. Brandon was startled through her brain new sensations danced. Brandon was wholly sensible of the little flutter that disturbed the super jazz that called to her with its melodies of lulling romance. Her feet were still and her slender, well-poised

CONDITIONS GOOD

Conditions generally in all parts of Western Canada are the best they have been since before the war, according to S. J. Hungerford, vice-president of the Canadian National Railways, who has recently returned from an extensive tour of inspection of that system's lines in the West. He states that there is a splendid spirit of optimism prevailing, which is fully justified by the prospects for a good crop and increasing business, also as a disposition to embark on new business ventures.

Referring to British Columbia, Mr. Hungerford reported a heavy volume of lumber going to both Canadian and United States ports on the Atlantic seaboard as well as to European ports via the Panama canal. Also the indications are that the Pacific Coast provinces will have the largest fruit crop of its history this year.

AN ENVIABLE POSITION

"In estimated national wealth in millions of dollars, Canada stands seventh on the list, higher than Australia, Brazil, Argentina and, in fact, higher than any of the newer countries into which surplus population can freely flow," Dr. D. A. McGibbon, professor of political economy, University of Alberta, stated recently. In wealth per capita Canada is only surpassed by the United States and Great Britain, continuing "Canada is among the only five nations showing a surplus on current account and is also among countries having a food surplus. She ranks 6th among the nations as an exporter and seventh as an importer."

His Excellency Major J. A. Burdon, C.M.G., governor of British Honduras, who was a visitor in Canada a few weeks ago, called attention to the fact that Canadian manufacturers should pay more attention to the Central and South American markets. He said Canada exported very little outside of wheat products to the countries on the equator, whilst the United States and Germany are selling goods there which might well be sent from this country. People in those countries, and in British Honduras especially, would buy Canadian goods if they were offered in the right way, he said, but so far Canadian merchants had not gone to the trouble to present their goods in a manner which appeals. While 98 per cent. of the flour used in British Honduras is from the Canadian West, there is a appalling scarcity of other Canadian goods.

Correspondence

Whilst we are at all times willing to publish letters of public interest from correspondents, we do not bind ourselves to the opinions expressed therein.

THANKS!
(Editor "Delia Times.")
Hanna, July 5, 1926.

Sir,—Permit me to express through your paper the thanks of the people of Hanna for the splendid patronage your town and district gave us on the 1st of July.

We regret on account of the very large crowd that every convenience which should have been supplied was neglected, but we assure you that on any future occasion this will not occur again.

Yours truly,
G. H. WADE, Mayor.

A CORRECTION

In last week's Delia Times the report of the trial of several citizens charged with interfering with a religious service was incorrect on many points. The report stated that the accused committed the offence in ignorance of the law, and the suggestion in the report was that for this reason the accused were found not guilty. The fact is that no service was in progress and the accused were not interfering with any religious service. They were charged with disturbing the peace and were found guilty on that charge the day did. The second case against W. C. Clark was reported as being dismissed because the charge was laid under a wrong section of the act. This is not correct; the reason for the charge being dismissed was that there was no evidence whatever of the offence charged, that no force or threats had been made by the accused and that no preacher was in charge or attempting to conduct the service. Also the statement was made that several of the accused were under the influence of liquor. This statement is not correct as under cross-examination the complainants could not identify anyone who was intoxicated and the only reason for intoxication being suggested was the statement by one of the accused that one of the preachers was a fool and hypocrite.

* * *

Services in connection with the United Church will be held on Sunday, July 18, as follows:—Mr. Marr, at Blair School, 2 p.m., Verdant Valley 4 p.m., and Delia 7.30 p.m.

* * *

The death took place on Tuesday night from convulsions at Drumheller Hospital of the infant daughter of Mr. and Mrs. Guy Long, aged 12 months. Interment took place this (Thursday) afternoon in Delia cemetery.

* * *

Mr. and Mrs. Leslie Dunfield and family left last week for Calgary and Banff, Lake Louise and Cranbrook. They intend returning by the midfields, and Red Deer on a visit to Mrs. Dunfield's parents, Mr. and Mrs. G. Sprost.

* * *

Mr. and Mrs. J. Korbel and Mr. and Mrs. F. Veleta, of Chicago, who are on a touring trip through Canada, were the guests for a few days this week of Mrs. Korbel's sister and brother-in-law, Mr. and Mrs. Stanley Horsky.

* * *

At Delia, on Monday, William Billings and Norman Hunter, of the Craigmyle district, was fined $1 and costs by L. Stephens, J.P., for refusing to destroy noxious weeds on their farms after being warned by the weed inspector. These were the first offences in this district and the magistrate warned the offenders that unless the weeds were destroyed the penalty would be more severe in the future.

* * *

A public meeting on noxious weeds will be held in Coates' hall on Monday evening next, when addresses will be delivered by Prof. Grisdale, of Olds School of Agriculture; J. M. Black, and J. R. Boon. Mr. Black will deal with the proper method of summerfallowing, whilst Mr. Boon will point out the identification of weeds. The addresses will be illustrated by moving pictures, and the farmers of the district are invited.

SENTINEL HILL ITEMS.

Mr. and Mrs. R. A. MacPherson and family and Mrs. D. MacPherson left last week on a holiday to Calgary and Banff.

Mrs. Wm. Morrison and daughter Alice spent part of last week in Calgary.

The annual picnic under the auspices of the Sentinel Hill W.I. was held at the school on Monday afternoon. After a programme of sports for the school children, a bounteous lunch was partaken of by those present.

G. E. Hewson had the misfortune to injure his right leg while plowing with his tractor on Friday.

Frances Stevenson is at present under the care of Dr. Kydd. Her little friends hope she may have a speedy recovery.

Mrs. McLeod, our teacher for the past two years, has resigned and left for her home at Morrin last week.

Miss Lena Heath left on Monday for a trip to the Coast, travelling via Edmonton, where she will spend a few days with her sister, Miss Annie Heath, nurse in training at the Royal Alexander Hospital.

Mrs H. Hey and Miss Ethel Hudgson, also Master T. Hey, are spending this week on a trip to Vancouver.

Miss E. Heath and her uncle, D. J. Elliott, are motoring to Olds to attend the students' reunion on July 14.

J. H. Graham was a visitor to the Calgary Stampede last week for several days.

Cards of Thanks.

The Delia Girls' Club wish to thank those who so kindly loaned their cars to take them to and from their dance on the Red Deer river.

Death of Geo. B. Morrison

The death took place on Sunday last, after a lingering illness from leukemia, of George B. Morrison, of the Hand Hills, aged 40 years. The deceased came to this district from Ontario 20 years ago, being one of the early pioneers. He homesteaded 12 miles south-east of Delia, where he had resided ever since.

The deceased leaves a widow and one son, Charles, and daughter, Jean, in addition to a brother at Crossfield and one in Montana, whilst his father and two brothers and two sisters still live in Ontario.

The funeral took place Tuesday from the Pentecostal Church, Delia, conducted by Mr. J. Sauve, and was largely attended. The pall-bearers were W. R. Peet, T. Clark, Bruce Allen, Bert Smith, Roy Lindsay and H. Broadbent, of the Loyal Orange Lodge.

Camp Elinor

The constituency camp of the W.I. Girls' Clubs of the Hand Hills Constituency was held from July 8rd to 9th at the old Wigmore Smith buildings on the banks of the Red Deer river. This ranch was established 23 years ago and was used for ranching purposes until about ten years ago when it was sold for farm land.

It is the hope of the camp girls and the leaders that this camp will be held each year and so they named it Camp Elinor in honor of Mrs. Elinor Wigmore's reason who lived for many years on the ranch and rode the range, a typical cow-girl, long before the time of automobiles, aeroplanes and wireless, but in the time when 90 miles was not such a long way to freight provisions.

At the camp this year there were 27 girls and three leaders. The program included the usual camp schedule of hiking, swimming, berry-picking and camp fires. The camp was successful in receiving a visit from Mrs. G. M. Gibson, of Drumheller, and while at the camp she gave the girls a very interesting talk on "Preparation for Life work," under the headings of enjoying the pleasures of youth, building up a healthy body, securing an education, and soul preparation.

The last campfire of the week brought a climax to the 1926 camp, and by the light of many flames the Camp Elinor song was read and two girls from Munson and two from Delia gave their impressions of camp life. The evening closed with a few words of appreciation to the leaders, Mesdames Valleyy, Bessie and Martin, and the singing of "For they are jolly good fellows."

Drowned at Drumheller

Bert Evans was drowned in the Red Deer river at Drumheller about 3 o'clock on Sunday afternoon. It appears that with other young men he attempted to cross the river where it was shallow enough to walk most of the ways but did not know this and swam where he could have walked. Then when he came to a deep part he became exhausted and sank, no one being near enough to rescue him.

Pete Knight Wins at Winnipeg

Winnipeg, July 7.—Turning in a superb display of horsemanship every time he came out of the chute, Pete Knight, of Crossfield, Alberta, won the open brook riding championship here at the closing night of Winnipeg's stampede on Tues. His win carried a cash purse of $1,500, a silver bridle donated by Tom Mix, the movie star, and a hand-made saddle.

Ray Knight, of Raymond, copped a call in 28 3-5 seconds at Calgary Stampede, and won a side bet of $600 from Bruce Cox who bet Knight could not rope the calf under 30 seconds.

Have Gas Cooking In Your Home, Too!

HERE is the cooker that puts an end to cook stove drudgery! It's the Coleman, the modern stove that makes and burns its own gas—gives housewives on farms and in small towns all the conveniences of a city gas range. It's a gas range and gas plant, all in one. Easy and safe to operate. Tank can't spill fuel, can't be filled while in use, no crawling flame. A cleaner, hotter flame than natural gas or kerosene. A clean kitchen—always, and clean pots and pans—no smoke, no soot.

The Coleman cooks an average meal on 5c worth of fuel. Made in various styles and sizes from small Bungalow Cookers to big, high-overranges. Come in for a demonstration.

R. A. Stewart, Hardware, Furniture, Tinsmithing

The Chevrolet

The car you need at the price you want to pay

TO a greater extent than any other low-priced car, Chevrolet fits the needs and the pocketbook of the average Canadian family.

¶ Fits the needs because it has, at the outset, the complete equipment necessary to real motoring satisfaction. The IMPROVED Chevrolet—the latest and greatest Chevrolet—is as complete mechanically as most cars selling for two thousand dollars or more.

¶ Fits the pocketbook because its first cost is low—its low operating cost and almost negligible depreciation.

Let us give you a demonstration.
